Systems Modelling For Energy Policy:

Systems Modelling for Energy Policy Derek W. Bunn, Erik R. Larsen, 1997-07-07 Energy is a sector where there has always been a serious modelling tradition but with the worldwide trend away from planned economies to new market structures the risk uncertainties and competitive aspects which need to be incorporated pose new challenges to analyse strategic as well as economic behaviour Systems Modelling for Energy Policy addresses the strong and apparently countervailing themes dominating energy policy in the current decade concerns about global warming have stimulated an intense and methodologically diverse level of analytical activity aimed ultimately at greater international co ordination in policy and planning simultaneously we are witnessing a worldwide trend away from planned national energy policies to new market structures To accommodate these shifts in focus more comprehensive analytical procedures are needed to address technical challenges in handling large models whilst smaller policy specific behavioural models may give greater insight to the strategic challenges involved in maintaining focus on key industry restructuring issues for which past data is not available This volume provides a comprehensive and up to date reference to the range of issues and modelling alternatives that a systems perspective gives to the analysis of energy policy Practitioners analysts and researchers will find new studies and comparative modelling insights in this book which are not easily accessed elsewhere **Informing Energy and**

Climate Policies Using Energy Systems Models George Giannakidis, Maryse Labriet, Brian Ó Gallachóir, GianCarlo Tosato, 2015-04-06 This book highlights how energy system models are used to underpin and support energy and climate mitigation policy decisions at national multi country and global levels It brings together for the first time in one volume a range of methodological approaches and case studies of good modeling practice on a national and international scale from the IEA ETSAP energy technology initiative It provides insights for the reader into the rich and varied applications of energy system models and the underlying methodologies and policy questions they can address The book demonstrates how these models are used to answer complex policy questions including those relating to energy security climate change mitigation and the optimal allocation of energy resources It will appeal to energy engineers and technology specialists looking for a rationale for innovation in the field of energy technologies and insights into their evolving costs and benefits Energy economists will gain an understanding of the key future role of energy technologies and policy makers will learn how energy system modeling teams can provide unique perspectives on national energy and environment challenges The book is carefully structured into three parts which focus on i policy decisions that have been underpinned by energy system models ii specific aspects of supply and end use sector modeling including technology learning and behavior and iii how additional insights can be gained from linking energy system models with other models The chapters elucidate key methodological features backed up with concrete applications The book demonstrates the high degree of flexibility of the modeling tools used to represent extremely different energy systems from national to global levels Energy Abstracts for Policy Analysis ,1976-07

Limiting Global Warming to Well Below 2 °C: Energy System Modelling and Policy Development George Giannakidis,Kenneth Karlsson,Maryse Labriet,B. Ó Gallachóir,2018-03-31 This book presents the energy system roadmaps necessary to limit global temperature increase to below 2 C in order to avoid the catastrophic impacts of climate change It provides a unique perspective on and critical understanding of the feasibility of a well below 2 C world by exploring energy system pathways technology innovations behaviour change and the macro economic impacts of achieving carbon neutrality by mid century The transformative changes in the energy transition are explored using energy systems models and scenario analyses that are applied to various cities countries and at a global scale to offer scientific evidence to underpin complex policy decisions relating to climate change mitigation and interrelated issues like energy security and the energy water nexus It includes several chapters directly related to the Nationally Determined Contributions proposed in the context of the recent Paris Agreement on Climate Change In summary the book collates a range of concrete analyses at different scales from around the globe revisiting the roles of countries cities and local communities in pathways to significantly reduce greenhouse gas emissions and make a well below 2 C world a reality A valuable source of information for energy modellers in both the industry and public sectors it provides a critical understanding of both the feasibility of roadmaps to achieve a well below 2 C world and the diversity and wide applications of energy systems models Encompassing behaviour changes technology innovations macro economic impacts and other environmental challenges such as water it is also of interest to energy economists and engineers as well as economic modellers working in the field of climate change mitigation Energy Policy Modeling in the 21st Century Hassan Qudrat-Ullah,2013-10-04 The roles and applications of various modeling approaches aimed at improving the usefulness of energy policy models in public decision making are covered by this book The development validation and applications of system dynamics and agent based models in service of energy policy design and assessment in the 21st century is a key focus A number of modeling approaches and models for energy policy with a particular focus on low carbon economic development of regions and states are covered Chapters on system dynamics methodology model based theory fuzzy system dynamics frame work and optimization modeling approach are presented along with several chapters on future research opportunities for the energy policy modeling community The use of model based analysis and scenarios in energy policy design and assessment has seen phenomenal growth during the past several decades In recent years renewed concerns about climate change and energy security have posed unique modeling challenges By utilizing the validation techniques and procedures which are effectively demonstrated in these contributions researchers and practitioners in energy systems domain can increase the appeal and acceptance of their policy models Proceedings of the Summer Computer Simulation Conference ,1987 Notes on a Workshop on Energy Systems Modelling Stanford University.
