Tactical Missile Aerodynamics:

Tactical Missile Aerodynamics Michael J. Hemsch, 1992 This two volume set includes discussions of the physics of the fluid mechanics phenomena associated with tactical missile flight and the full range of prediction methods required to analyze current and future missiles It s a valuable resource for missile aerodynamicists designers and researchers

Tactical Missile Aerodynamics M. R. Mendenhall, 1992 **Tactical Missile Aerodynamics** M. R. Mendenhall, 1992

An Introduction to Tactical Missile Aerodynamics R. G. Lacau, ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT NEUILLY-SUR-SEINE (FRAN CE), 1988 This lecture provides a general review of tactical missile aerodynamic considerations The different aspects considered are the general aerodynamics design with some problems encountered on existing and future missiles the specificities of tactical missile aerodynamics and a survey of the most important semi empirical and numerical methods The semi empirical methods have led to the development of a large variety of practical tools which are not expensive in computer time and are routinely used by the project engineers but they are restricted to conventional missile and global aerodynamics The numerical methods much more recent which consist of solving the Navier Stokes equations the Euler equations the full potential equation and the linearized case a list of various codes is provided with their actual capabilities **Tactical Missile Aerodynamics** M. R. Mendenhall, 1992 **Tactical Missile Aerodynamics : Prediction Methodology**, 1992 *Tactical Missile Design* Eugene L. Fleeman, 2006 This textbook will provide a basis for including tactical missile design as part of the aerospace engineering curriculum providing new graduates with the knowledge they will need in their careers **Report**, 1965 **Special Course on Missile Aerodynamics** Organisation du traité de l'Atlantique Nord. Groupe consultatif pour la recherche et le développement aérospatial, 1988 *Missile Aerodynamics*, 1998 This report contains the papers prepared for the Symposium on

Scientific and Technical Aerospace Reports, 1990 **The Present Status and the Future of Missile Aerodynamics**, 1988 *U.S. and U.S.S.R. Military Aircraft and Missile Aerodynamics (1970-1980)*, 1981 **Missile Aerodynamic Parameter and Structure Identification from Flight Test Data** James E. Kain, Charles M. Brown (Jr.), Jang G. Lee, 1977 **L'Aérodynamique Des Missiles** North Atlantic Treaty Organization. Advisory Group for Aerospace Research and Development. Fluid Dynamics Panel. Symposium, 1990 The Fluid Dynamics Panel of AGARD organised this Symposium on Missile Aerodynamics to i review current progress and achievements ii highlight outstanding problems and iii establish pointers for planning future research programmes The Symposium addressed many aspects of the aerodynamic design and performance of missiles for the subsonic through to the hypersonic flight regimes and reviews were included covering the stability and control of tactical missiles and the progress made in the field of store carriage and release 31 papers were presented in seven sessions with contributions from Canada France Germany Turkey United Kingdom and United States Topics considered in the Symposium are computational methods and validation empirical tools and

experimental techniques flow separation and interference effects unconventional shapes and projectiles propulsion and base flows aerothermodynamics and hypersonics The volume includes all the unclassified papers presented at the Symposium together with a transcript of the discussion which took place at the conclusion of the meeting **AGARD Report**, 1994

Parameter Estimation of a Tactical Missile Using Linear Regression, 2006 This research presents the method of Linear Regression as a parameter identification method to determine the longitudinal dimensional stability derivatives of a tactical missile Missile flight histories are characterized by rapid accelerations rapidly changing mass property characteristics with often short flight times These characteristics make accurate parameter estimation of the missile aerodynamics more challenging than for aircraft The simulation used for this research was created in MATLAB SIMULINK based on the missile trajectory program TRAP The aerodynamic data for the 6 DoF missile model was based on a supersonic tail controlled missile similar to an AIM 9X missile Two command input types were investigated for excitation of the system modes This research shows that linear regression can be used successfully in determining longitudinal dimensional stability derivatives of a tactical missile in flight when using a control input form with higher frequency modulations such as band limited or filtered white noise *Prediction of Tactical Missile Dynamics* L. E. Ericsson, LOCKHEED MISSILES AND SPACE CO INC SUNNYVALE CA., 1989 The aerodynamic information needed for preliminary design of tactical missiles has always been obtained through the combined use of theory and experiments In regard to the static aerodynamics this has resulted in a prediction capability that often is satisfactory for preliminary design However the vehicle dynamics cannot be predicted with the same confidence especially not at the high angles of attack where high performance missiles often must operate In this case we are still dependent upon continuous efficient interaction between theoretical and experimental methods The paper delineates the limitations of both methods and describes how to circumvent them in order to predict tactical missile dynamics over the required range of operational parameters JES Approximate Methods for Weapon Aerodynamics Frankie Gale Moore, 2000 Moore brings 30 years of experience in weapons development to help bridge the gap between the academic textbook and practical application The book reviews all approaches to calculate aerodynamics allowing engineers to see the pros and cons of each approach setting the stage for a semiempirical approach It contains many approximate aerodynamic methods bringing together in a single text both linearized and nonlinear aerodynamic methods Practicing engineers will value the book's emphasis on understanding the physics involved understanding the assumptions made to get to the approximate approaches and showing final equations used in the solution process Proceedings of the Special Course on Missile Aerodynamics, Held in Rhode-Saint-Genese, Belgium on 30 March-3 April 1987, Held in Athens, Greece on 18-19 May 1987 Held in Ankara, Turkey on 21-22 May 1987 ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT NEUILLY-SUR-SEINE (FRANCE), 1988 This course of 12 lectures presents the current state of the art in fundamental knowledge and in practical predictive methods in tactical missile aerodynamics The first lecture surveys

aerodynamic problems encountered on existing and future missiles and the most important predictive methods A lecture follows on the criteria that define the required prediction accuracy in terms of allowable errors in missile performance and design parameters The 3rd lecture covers nonlinear aerodynamic effects including formation of flow separation vortices vortex wakes and vortical interference and nonlinear compressibility due to presence of shocks Several lectures present engineering computation methods used for calculating stability and control for conventional and unconventional missiles illustrated by numerous practical examples They fall into two categories semi empirical methods based on the equivalent angle of attack concept and numerical methods much more recent based on the resolution of the steady and the unsteady Euler equations with flow separation vortices Prediction of dynamic derivatives is also presented with a description of the experimental methods An extensive lecture describes the role of the intake in the propulsion system of turbojet and ramjet powered missiles and addresses both the internal and external aerodynamic aspects of the induction system A computer aided design procedure for use in conceptual design for sizing and shaping supersonic airbreathing missiles is presented The prediction of aerodynamic heating and base flows with and without propulsion and the design of the next generation supersonic and hypersonic missiles are discussed edc
