## **Systematic Geomorphology:**

*Systematic Geomorphology* Adrian E. Scheidegger, 2012-12-06 To most people travel is an exciting experience. When one journeys around the world one is struck by the great variety and beauty of the landscapes that one encounters. The scientific mind naturally is not satisfied with admiring the various landscapes but would like to understand how they were formed. The exact theory of landscape formation is a very complicated affair but much can be learnt from accurate observation. The need for the present little book became apparent to the writer during his studies of the mechanics of landscape formation. It turned out that there was in fact no systematic compilation of those surface features of the Earth available that have to be explained by theory. In effect even the taxonomic principles that have to be applied in a classification of landscapes have nowhere been clearly stated. Thus this book is intended to present a pictorial taxonomy of geomorphic features based on the basic principles of landscape genesis as they have recently been worked out. The pictures have all been taken by the writer himself during many geoscientific studies and travels throughout the world. Some of these pictures had already been used in earlier publications of the writer's. **Geomorphology** Arthur Leroy Bloom, 1978 A systematic analysis of landforms of the late Cenozoic Era that fully covers the constructional processes of tectonism and volcanism and the erosional processes of weathering, fluvial erosion, glaciers, winds and waves. It explains each set of processes and the resulting landforms in a separate chapter to provide a comprehensive nonmathematical overview of the subject. Coverage of rock weathering includes more discussion of soils, soil formation and soils chronosequences which tell about the evolution of the present landscape. A chapter on The Last Glacial Interglacial Cycle stresses the intensity of change during and since the last ice age when human civilization has risen and appeals to readers to understand change as a normal factor of life on Earth. **Geomorphic Analysis of River Systems** Kirstie A. Fryirs, Gary J. Brierley, 2012-12-10 Filling a niche in the geomorphology teaching market this introductory book is built around a 12 week course in fluvial geomorphology. Reading the landscape entails making sense of what a riverscape looks like, how it works, how it has evolved over time and how alterations to one part of a catchment may have secondary consequences elsewhere over different timeframes. These place based field analyses are framed within their topographic, climatic and environmental context. Issues and principles presented in the first part of this book provide foundational understandings that underpin the approach to reading the landscape that is presented in the second half of the book. In reading the landscape detective style investigations and interpretations are tied to theoretical and conceptual principles to generate catchment specific analyses of river character, behaviour and evolution including responses to human disturbance. This book has been constructed as an introductory text on river landscapes providing a bridge and/or companion to quantitatively framed or modelled approaches to landscape analysis that are addressed elsewhere. Key principles outlined in the book emphasise the importance of complexity, contingency and emergence in interpreting the character, behaviour and evolution of any given system. The target audience is second and third year undergraduate students.

in geomorphology hydrology earth science and environmental science as well as river practitioners who use geomorphic understandings to guide scientific and or management applications The primary focus of Kirstie and Gary's research and teaching entails the use of geomorphic principles as a tool with which to develop coherent scientific understandings of river systems and the application of these understandings in management practice Kirstie and Gary are co-developers of the River Styles Framework and Short Course that is widely used in river management decision making and training Additional resources for this book can be found at [www.wiley.com/go/fryirs/riversystems](http://www.wiley.com/go/fryirs/riversystems)
