Kuwana, 2016-02-04 This book provides a comprehensive review of the recent advances in the research of systemic sclerosis scleroderma Systemic sclerosis is a complex autoimmune disease characterized by vasculopathy fibrosis and immune activation This disease is also associated with certain susceptibility genes and is affected by epigenetic regulation Recent studies have revealed a variety of new evidence suggestive of the pathogenesis of the disease These include endothelial progenitor cells cytokines and growth factors and B cells Studies using animal models have also provided novel insight into the pathomechanisms In addition to these topics the book covers clinical research regarding biomarkers and autoantibodies This volume will benefit all rheumatologists and dermatologists as well as basic scientists especially immunologists molecular biologists and biochemists *New Insights into Systemic Sclerosis* Michal Tomcik, 2019-09-18 Systemic sclerosis scleroderma is an incurable connective tissue disease of unknown etiology Three key processes play a pivotal role in the pathogenesis immune dysregulation and inflammation endothelial injury and vasculopathy and fibrosis Tissue fibrosis is the dominant and characteristic feature that affects the skin and visceral organs Life expectancy of scleroderma patients has improved over recent years mainly because of better treatment of organ involvement and complications however no curative

disease modifying therapies exist to date This book aims to provide students trainees rheumatologists and other specialists interested in this disease with a comprehensive overview of novel pathogenetic mechanisms management approaches and therapeutic targets of several major vascular and fibrotic manifestations and is useful insight into a number of usually neglected aspects of scleroderma     Systemic Sclerosis: An Autoimmune Disease Billy Patterson,2021-11-16 Systemic sclerosis or systemic scleroderma is an autoimmune disease of the connective tissue The condition is characterized by the thickening of the skin due to a deposition of collagen and injuries to small arteries Systemic sclerosis is of two types localized and systemic The localized condition affects the skin of the hands feet and the face while the systemic condition involves the heart lungs kidneys and gastrointestinal tract Death due to sclerosis often occurs due to heart lung and kidney involvement Sclerosis is also considered to be a risk factor for cancer The diagnosis of sclerosis is based on clinical examination biopsy and presence of autoantibodies There is no known cure for sclerosis Treatment consists of NSAIDs calcium channel blockers and topical therapies for improving pain and ulceration and relieving other symptoms This book elucidates the concepts and innovative models around the management of systemic sclerosis It presents researches and studies performed by experts across the globe Students researchers experts and all associated with immunology will benefit alike from this book

**Scleroderma (progressive Systemic Sclerosis)** Alfred John Barnett,1974     Systemic Sclerosis Ali Nawaz Khan,2018 Progressive systemic sclerosis scleroderma is a complex multi organ autoimmune connective disease that has protean manifestations although mostly pulmonary other organs are involved in circumstances that manifest as overlap syndromes Progressive systemic sclerosis scleroderma affects adult patients with a female predominance but children are not immune A common theme includes tissue fibrosis and vasculopathy Skin sclerosis is a common occurrence but clinical findings can be associated with skin inflammation fibrosis and vascular changes which are most pronounced in the fingers toes and around the nose and mouth There is variable visceral organ involvement including the esophagus the bowels and the kidneys but vasculitis can affect any organ Any visceral organ including the brain can be affected The extent of system involvement and the variety of clinical presentation makes accurate diagnosis elusive The differentiation between liver disease secondary to connective tissue disorders and primary liver disease such as hepatitis can be extremely challenging since there is a similar immunological mechanism of causation Most patients with connective tissue diseases exhibit liver function abnormalities that likely result from coexisting fatty liver viral hepatitis primary biliary cirrhosis portal hypertension autoimmune hepatitis and hepatic toxicity due to drugs Liver damage whatever the cause can be progressive and ultimately fatal The challenges we face in the diagnosis of liver damage secondary to connective tissue and differentiation from the primary liver disease are challenging Diagnosis is therefore vital whether by invasive or non invasive techniques to institute appropriate management Early reviews of the pathophysiological clinical and pharmacological aspects of scleroderma PSS suggested that the disease was complex of chronic nature and slow in onset The pathophysiological changes are variable affecting the blood vessels the

collagen fibers the connective tissues and deposition of fibrin and inflammatory reactions Any fibril containing organs can be affected as well The most common presentations are Raynaud's phenomenon of the extremities mainly the arms and hands vascular inflammation and fibrosis firm facial skin and the limitation of joint movement by pericapsular soft tissue calcification Atrophy of the gastrointestinal tract's smooth muscles particularly of the gastric cardia is also possible The changes described may cause malabsorption Lung changes are common due to progressive pulmonary fibrosis leading to right-sided heart failure and respiratory insufficiency Involvement of the liver kidneys and the endocrine glands are however rare Any organ may be affected but mortality increases when the heart kidney or lungs are affected Various therapeutic regimens have been instituted with variable success including the use of vasodilators corticosteroids and a variety of anti-inflammatory agents Some success with excellent therapeutic effects without serious side effects has been achieved
