,1992 **Computer Programming and Coding Standards for the FORTRAN and SIMSCRIPT II. 5 Programming Languages** Robert T. Bevan,John H. Reynolds,1980 Contemporary studies of the software development process have shown definitively that an ad hoc attempt at developing large and complex programming systems yields software that is too expensive too difficult to maintain inefficient and often incorrect Worse it is very difficult to assure oneself that it is correct This report deals with standards that make the development of programs a more precise process This does not mean to imply that use of a rigorous set of programming standards is a panacea for computer programming On the contrary use of standards merely reduces the number of errors introduced Using standards such as those documented in this report will be seen to require more effort on the part of the programming staff than heretofore This effort is not in vain however since the additional effort consists of tasks that were simply not done in the approaches of the past Additionally standards greatly improve the reliability maintainability and transportability of the resultant programs
