urbanism the book asks What are the key principles of an ecological urbanism How might they be organized And what role might design and planning play in the process While climate change sustainable architecture and green technologies have become increasingly topical issues surrounding the sustainability of the city are much less developed The premise of the book is that an ecological approach is urgently needed both as a remedial device for the contemporary city and an organizing principle for new cities Ecological urbanism approaches the city without any one set of instruments and with a worldview that is fluid in scale and disciplinary approach Design provides the synthetic key to connect ecology with an urbanism that is not in contradiction with its environment The book brings together design practitioners and theorists economists engineers artists policy makers environmental scientists and public health specialists with the goal of reaching a more robust understanding of ecological urbanism and what it might be in the future Contributors include Homi Bhabha Stefano Boeri Chuck Hoberman Rem Koolhaas Sanford Kwinter Bruno Latour Nina Marie Lister Moshen Mostafavi Matthias Schuler Sissel Tolaas Charles Waldheim Skyscrapers Caroline Mierop, Georges Binder, 1995 Examines the history design construction and uses of skyscrapers and describes some notable examples **The Architectural Review** ,2006 Details in Architecture ,1998-12-31 This series combines into one highly informative volume commercial and residential details Extensive **Post-merdeka architecture** ,1987 **Blueprint** ,2000
