## Tables Of Lamé Polynomials:

*Tables of Lamé Polynomials* F.M. Arscott, I.M. Khabaza, 2014-05-23 *Tables of Lamé polynomials* presents tables of Lamé polynomials which were calculated on the Ferranti Mercury machine at the London University Computer Unit in England. Lamé polynomials are solutions of Lamé differential equation which is used in a number of different forms including the Jacobian form. A particular Lamé polynomial is specified completely apart from a constant multiplier by the type number, the value of  $N$  and the position of the corresponding eigenvalue of  $h$  in the set of such eigenvalues. Comprised of three chapters, this volume begins with an introduction to the theory of Lamé polynomials and the equations involved together with their elementary properties and correspondence with other notations. The tabulated form of Lamé polynomials and the method of tabulation are discussed and approximations in limiting cases are considered. The next chapter deals with the method of computation of the Lamé polynomials including the calculation of the coefficients, eigenroots and eigenvectors. The book concludes with a description of the instructions and terms used in the program using the PIG input routine on the Ferranti Mercury computer. This monograph will be of interest to mathematicians and mathematics students.

*Tables of Lamé Polynomials*, by F.M. Arscott and I.M. Khabaza. F. M. Arscott, 1962. [NIST Handbook of Mathematical Functions Hardback and CD-ROM](#) Frank W. J. Olver, 2010-05-17. The new standard reference on mathematical functions replacing the classic but outdated handbook from Abramowitz and Stegun. Includes PDF version. **Periodic Differential Equations** F. M. Arscott, 2014-05-16.

*Periodic Differential Equations: An Introduction to Mathieu, Lamé and Allied Functions* covers the fundamental problems and techniques of solution of periodic differential equations. This book is composed of 10 chapters that present important equations and the special functions they generate, ranging from Mathieu's equation to the intractable ellipsoidal wave equation. This book starts with a survey of the main problems related to the formation of periodic differential equations. The subsequent chapters deal with the general theory of Mathieu's equation, Mathieu functions of integral order and the principles of asymptotic expansions. These topics are followed by discussions of the stable and unstable solutions of Mathieu's general equation, general properties and characteristic exponent of Hill's equation and the general nature and solutions of the spheroidal wave equation. The concluding chapters explore the polynomials, orthogonality properties and integral relations of Lamé's equation. These chapters also describe the wave functions and solutions of the ellipsoidal wave equation. This book will prove useful to pure and applied mathematicians and functional analysis.
