Star Clusters:

Star Clusters Charles A. Cardona III, 2010-11-08 I have spent many wonderful nights observing at a variety of places around the world but many of my fondest memories come from those made at the Custer Observatory in Southold on Long Island where I grew up I was only perhaps a dozen years old when I started out and now more than three decades later I have logged millions of miles on the various telescopes there Some of the best memories are of observing and discussing astronomical topics with the many really terrific people who make up Custer It truly holds a special place in my heart Star clusters were always among my favorite objects to observe and discuss there This book is the result of the exposure to these objects many of which I observed for the first time at Custer The Custer Institute Observatory was founded in the 1920s by local resident Charles W Elmer of Perkin Elmer Corp fame The original crew met at his house in Cedar Beach a few miles down the road from the institute In the 1930s the group built an observatory complete with Mr Elmer's donated 5 Alvan Clark refractor Later the observatory expanded to include a 6 Clark refractor and other even larger instruments "A" *Selection of Photographs of Stars, Star-clusters and Nebulae, Together with Information Concerning the Instruments and the Methods Employed in the Pursuit of Celestial Photography* Isaac Roberts, 1893 *Messier's Nebulae and Star Clusters* Kenneth Glyn Jones, 1991-04-04 Charles Messier's catalog of nebulae and star clusters published in 1784 marked the start of a new era of deep sky astronomy Today this tradition of observing galaxies and clusters is kept alive by dedicated amateur astronomers Nearly all the objects are visible in a small telescope and many such as the Crab Nebula and the Andromeda galaxy are among the most fascinating objects in the universe Kenneth Glyn Jones has revised his definitive version of Messier's catalog His own observations and drawings together with maps and diagrams make this a valuable introduction to deep sky observing Historical and astrophysical notes bring the science of these nebulae right up to date This is a unique handbook unlikely ever to be equaled in its completeness and importance to the telescope owner **Star Groups** John Ellard Gore, 1891 **Nuclear Science Abstracts**, 1975 *Star Atlas* Hermann Joseph Klein, 1893 **Star Clusters (IAU S266)** International Astronomical Union. Symposium, 2010-02-04 Star clusters are important to many areas of astronomy and as the basic building blocks of galaxies they can be used as key diagnostic tools within a wide range of disciplines in astrophysics Star cluster populations are powerful tracers of the formation assembly and evolutionary history of their parent galaxies Although their importance has been recognised for decades only in recent years has this area seen a major investment in time and effort IAU Symposium 266 consolidates the expertise of leading researchers from a variety of topical subfields in astrophysics to provide a comprehensive presentation of cutting edge developments in theory observations and simulations of star clusters and star cluster systems across a range of sizes and epochs This volume gives an account of this forefront research answering fundamental questions that will improve our understanding of numerous related issues and show how this field will take its next major step forward Star Clusters and How to Observe Them Mark

Allison,2006-04-04 Astronomy enthusiasts will all appreciate the detailed yet easily assimilated description of star clusters how they were formed as our Milky Way galaxy how they evolved and how they are classified The latest research has revealed a vast amount of fascinating information about the clusters along with some spectacular photographs Modern commercially made telescopes enable amateur astronomers to see a surprising amount of detail and to record using CCD cameras video webcams or even film some remarkably beautiful and detailed images Contained here also is detailed information on using refractors reflectors and of course Meade and Celestron s ubiquitous range of computer controlled SCT telescopes **The Formation and Evolution of Star Clusters** Kenneth Janes,1991 **The Birth of Star Clusters**

Steven Stahler,2017-11-04 All stars are born in groups The origin of these groups has long been a key question in astronomy one that interests researchers in star formation the interstellar medium and cosmology This volume summarizes current progress in the field and includes contributions from both theorists and observers Star clusters appear with a wide range of properties and are born in a variety of physical conditions Yet the key question remains How do diffuse clouds of gas condense into the collections of luminous objects we call stars This book will benefit graduate students newcomers to the field and also experienced scientists seeking a convenient reference **Star Clusters** B.W. Carney,W.E. Harris,2000-12-12

Star clusters are at the heart of astronomy being key objects for our understanding of stellar evolution and galactic structure Observations with the Hubble Space Telescope and other modern equipment have revealed fascinating new facts about these galactic building blocks This book provides two comprehensive and up to date pedagogically designed reviews on star clusters by two well known experts in the field Bruce Carney presents our current knowledge of the relative and absolute ages of globular clusters and the chemical history of our Galaxy Bill Harris addresses globular clusters in external galaxies and their use as tracers of galaxy formation and cosmic distance indicators The book is written for graduate students as well as professionals in astronomy and astrophysics **A Text-book of General Astronomy for Colleges and Scientific Schools** Charles Augustus Young,1889 **The System of the Stars** Agnes Mary Clerke,1890 **The Complex Lives of Star Clusters** David Stevenson,2015 As with the author s recent books Extreme Explosions and Under a Crimson Sun the complex topic of star clusters is broken down and made accessible with clear links to other areas of astronomy in a language which the non specialist can easily read and enjoy The full range of a star cluster s lifespan is depicted as both globular and open clusters are tracked from birth to eventual death Why is it some are dense conglomerates of stars while others are looser associations Are the young brilliant clusters seen in neighboring galaxies such as the Large Magellanic Cloud M33 or M82 analogous to the ancient globulars seen in the Milky Way How will these clusters change as their stars wane and die More interestingly how does living in a dense star cluster affect the fates of the stars and any attendant planets that accompany them Star clusters form many of the most dazzling objects in the astronomers catalogs Many amateur astronomers are interested in exploring how these objects are created and what it would be like to live among these objects

From the historical views of how star clusters came about to the most recent assumptions about how stars within these clusters evolve different strands of science from observation to theory are woven together into a compelling investigation specifically targeted at amateur astronomers

Dynamics of Young Star Clusters and Associations Cathie Clarke, Robert D. Mathieu, Iain Neill Reid, 2015-09-11 Where do most stars and the planetary systems that surround them in the Milky Way form What determines whether a young star cluster remains bound such as an open or globular cluster or disperses to join the field stars in the disc of the Galaxy These questions not only impact understanding of the origins of stars and planetary systems like our own and the potential for life to emerge that they represent but also galaxy formation and evolution and ultimately the story of star formation over cosmic time in the Universe This volume will help readers understand our current views concerning the answers to these questions as well as frame new questions that will be answered by the European Space Agency's Gaia satellite that was launched in late 2013 The book contains the elaborated notes of lectures given at the 42nd Saas Fee Advanced Course Dynamics of Young Star Clusters Associations by Cathie Clarke University of Cambridge who presents the theory of star formation and dynamical evolution of stellar systems Robert Mathieu University of Wisconsin who discusses the kinematics of star clusters and associations and I Neill Reid Space Telescope Science Institute who provides an overview of the stellar populations in the Milky Way and speculates on from whence came the Sun As part of the Saas Fee Advanced Course Series the book offers an in depth introduction to the field serving as a starting point for Ph D research and as a reference work for professional astrophysicists
