**Focus on Earth Science**, 2001 *The Field Guide to Mixing Social and Biophysical Methods in Environmental Research* Rebecca Lave, Stuart Lane, 2025-02-25 Despite ongoing debates about its origins the Anthropocene a new epoch characterized by significant human impact on the Earth's geology and ecosystems is widely acknowledged Our environment is increasingly a product of interacting biophysical and social forces shaped by climate change colonial legacies gender norms hydrological processes and more Understanding these intricate interactions requires a mixed methods approach that combines qualitative and quantitative biophysical and social research However mixed methods environmental research remains rare hindered by academic boundaries limited training and the challenges of interdisciplinary collaboration Time funding and the integration of diverse data further complicate this research whilst the dynamics and ethics of interdisciplinary teams add another layer of complexity Despite these challenges mixed methods research offers a more robust and ultimately transformative understanding of environmental questions This Field Guide aims to inspire and equip researchers to undertake such studies Organized like a recipe book it assists researchers in the preparation of their field work as well as offering entry points to key methods and providing examples of successful mixed methods projects This book will be of interest to scholars wishing to tackle environmental research in a more holistic manner spanning sister disciplines such as anthropology statistics political science public health archaeology geography history ecology and Earth science **Glencoe Earth Science** Ralph M. Feather, 1999 Earth science is the study of Earth and space It is the study of such things as the transfer of energy in Earth's atmosphere the evolution of landforms patterns of change that cause weather the scale and structure of stars and the interactions that occur among the water atmosphere and land Earth science in this book is divided into four specific areas of study geology meteorology astronomy and oceanography p 8 9
