

- ❑ Many of these molecular ions ($M^{+\bullet}$) disintegrate at 10^{-10} to 10^{-13} seconds to give a positively charged fragment and a radical in the simplest case.
- ❑ If some Molecular ions remain intact long enough (about 10^{-6} seconds) to reach the detector.
- ❑ Most molecules show a peak for the molecular ion, the stability of which is usually in the order—Aromatic > Conjugated acyclic polyenes > Alicyclics > nhydrocarbons > ketones > ethers> Branched chain hydrocarbons > Alcohols.

Carrington, B. A. Thrush, 1988 Cold Trapped Molecular Ions Roth Bernhard, 2008

One of the current themes in quantum physics is the creation of cold 1 K molecules to study molecule molecule molecule atom and molecule radiation interactions under these novel low temperature conditions This book highlights the field of cold trapped molecular ions In particular the development of a novel universal cooling method for charged particles sympathetic cooling using laser cooled atoms together with the experimental and computational techniques required are extensively reviewed The book also reviews first spectacular applications of the cold ion ensembles produced the study of the properties of cold non neutral plasmas the study of ion neutral chemical reactions and of photodissociation processes and high resolution rotational overtone spectroscopy of cold hydrogen molecular ions with unprecedented spectral resolution The large potential of this field of research and its possible impact to other fields of physics chemistry and biology are highlighted The book summarizes the main lines of research in cold trapped molecular ion physics thus making it useful as an introduction for advanced students and experienced researchers

School of Natural Sciences, 2004 **Gaseous Molecular Ions** Eugen Illenberger, Jacques Momigny, 2013-03-09

Most of the matter in our solar system and probably within the whole universe exists in the form of ionized particles On the other hand in our natural environment gaseous matter generally consists of neutral atoms and molecules Only under certain conditions such as within the path of lightning or in several technical devices e.g. gas discharges rocket engines etc. will some of the atoms and molecules be ionized It is also believed that the chemistry of the earth's troposphere predominantly proceeds via reactions between neutral particles The complex system of atmospheric chemistry will be treated in one of the forthcoming volumes to this series Why then are ions considered so important that hundreds of laboratories all over the world including some of the most prestigious are involved in research programs on ions covering many different facets from biochemistry to physics One may obtain as many different answers as there are research groups busy in this field There is however one simple common feature which makes it attractive to work with ions since they carry one or more net elementary charges they can easily be guided, focused or separated by appropriate electric and magnetic fields and last but not least they can easily be detected Apart from these advantages which are welcome and appreciated by the researcher the study of molecular ions can provide insight into very fundamental aspects of the general

Spectroscopy of Molecular Ions Alessandra Puglisi,2017 Molecular ions cover important roles in study and characterization
of astrophysical and laboratory plasma To this purposes different spectroscopic techniques are used among which we found
the X ray photoelectron spectroscopy and the X ray photoabsorption spectroscopy This PhD work is focused on the
calculation of X ray photoabsorption spectra of molecular ions of silicon carbon and oxygen XH_n X Si C O n 1 2 3 The former
is excited on the L 2p shell while the others on the K 1s shell produced in plasma discharged We developed numerical
protocols which permits to compute with reasonable precision the K and L shell photoabsorption spectra combining
electronic structure and nuclear wavepacket propagation methods The optimization of the geometries and the calculation of
the ionization potentials IP are carried out using the density functional theory DFT The relaxation effects due to the core hole
creation are taken into account at the self consistent field SCF level The potential energy surfaces PES and the dipole
moment transitions are computed at the post Hartree Fock configuration interaction CI level The spin orbit coupling effect
are explicitly taken into account through the Breit Pauli operator The theoretical results have been compared with the
experimental data and they allow the interpretation of the experimental bands
