Statistical Issues in Allocating Funds by Formula National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Formula Allocations, 2003-02-24 In 2000 the federal government distributed over 260 billion of funding to state and local governments via 180 formula programs These programs promote a wide spectrum of economic and social objectives such as improving educational outcomes and increasing accessibility to medical care and many are designed to compensate for differences in fiscal capacity that affect governments abilities to address identified needs Large amounts of state revenues are also distributed through formula allocation programs to counties cities and other jurisdictions Statistical Issues in Allocating Funds by Formula identifies key issues concerning the design and use of these formulas and advances recommendations for improving the process In addition to the more narrow issues relating to formula design and input data the book discusses broader issues created by the interaction of the political process and the use of formulas to allocate funds Statistical Issues in Allocating Funds by Formula is only up to date guide for policymakers who design fund allocation programs Congress members who are crafting legislation for these programs and federal employees who are in charge of distributing the funds will find this book indispensable **Ridership Biases and Allocation of Transit Formula Grants** Xuehao Chu, 2004 **Journal of the American Statistical Association**, 2004 **Transit** National Research Council (U.S.). Thorson, 1994 Snaking 2 540 miles from Montana to the Mississippi River the Missouri is the longest waterway in the nation Its basin stretching 530 000 square miles extends broadly into ten states and twenty five Indian reservations For millions of years the river and its tributaries meandered untamed But that irrevocably changed with the passage of the Pick Sloan Plan part of the Flood Control Act of 1944 In River of Promise River of Peril John Thorson takes the first comprehensive look at how and why the Missouri River basin now with six major dams and hundreds of miles of navigation canals has become one of the most significantly altered drainage systems in the country He also looks at the consequences The Pick Sloan Plan he argues has not fared well over time particularly in its failure to provide an effective blueprint for regional river management Persistent conflicts over the river he contends illuminate important weaknesses of federalism in dealing with regional resources the most glaring being the exclusion of any proactive role for Indian tribal governments To support his argument Thorson examines the physical demographic and political features of the river basin analyzes the comprehensive river development that gave birth to the Pick Sloan Plan reveals why the original goals of the legislature were never achieved explores the deep seated and continuing tensions between basin governments

and investigates how Indian tribes the river's ecology and federalism have been damaged as the river has been developed. He also describes the various associations created and later abandoned from the sixties to the eighties and assesses their virtues and limitations. Thorson sees in the story of the Missouri River Basin the vertical and horizontal strains of federalism: the states chafing against federally mandated and controlled projects exacerbated by the lack of constitutional guidance for handling conflicts among neighboring states and with Indian nations. Not just bent on spotlighting problems, Thorson also evaluates different approaches for improved river system management and recommends a Missouri River management institution based on environmentally sensitive policies, a strong state role, and full participation by the basin's tribal governments.

The Writers Directory, 2013 Funding Public Schools Kenneth K. Wong, 1999

This book examines the fundamental role of politics in funding our public schools and fills a conceptual imbalance in the current literature in school finance and educational policy. Unlike those who are primarily concerned about cost efficiency, Kenneth Wong specifies how resources are allocated for what purposes at different levels of the government. In contrast to those who focus on litigation as a way to reduce funding gaps, he underscores institutional stalemate and the lack of political will to act as important factors that affect legislative deadlock in school finance reform. Wong defines how politics has sustained various types of rules that affect the allocation of resources at the federal, state, and local level. While these rules have been remarkably stable over the past twenty to thirty years, they have often worked at cross purposes by fragmenting policy and constraining the education process at schools with the greatest needs. Wong's examination is shaped by several questions: How do these rules come about? What role does politics play in retention of the rules? Do the federal, state, and local governments espouse different policies? In what ways do these policies operate at cross purposes? How do they affect educational opportunities? Do the policies cohere in ways that promote better and more equitable student outcomes? Wong concludes that the five types of entrenched rules for resource allocation are rooted in existing governance arrangements and seemingly impervious to partisan shifts, interest group pressures, and constitutional challenge. And because these rules foster policy fragmentation and embody initiatives out of step with the performance-based reform agenda of the 1990s, the outlook for positive change in public education is uncertain unless fairly radical approaches are employed. Wong also analyzes four allocative reform models: two based on the assumption that existing political structures are unlikely to change and two that seek to empower actors at the school level. The two models for systemwide restructuring aimed at intergovernmental coordination and/or integrated governance would seek to clarify responsibilities for public education among federal, state, and local authorities above all integrating political and educational accountability. The other two models identified by Wong shift control from state and district to the school: one based on local leadership and the other based on market forces. In discussing the guiding principles of the four models, Wong takes care to identify both the potential and limitations of each. Written with a broad policy audience in mind, Wong's book should appeal to professionals interested in the politics of educational reform and to teachers of courses
