## **Statistical Methods In Applied Chemistry Physical Sciences Data 39:**

Statistical Methods in Applied Chemistry Jurand Czermiński, 1990 Statistical Methods in Applied Chemistry deals in detail with the methods of statistical description and inference which are applied to chemical experimentation It introduces the reader to the problems of random variables and their distributions reviews principal statistical tests both parametric and non parametric presents basic models of variance analysis and deals with correlation of phenomena The material is presented from the viewpoint of the experimenter All methods are illustrated by numerical examples which reflect genuine experimental situations Useful for students and teachers at universities and polytechnics the book is of interest to scientists in all fields of pure and applied chemistry Moreover it will be invaluable for researchers in all experimental sciences where statistical methods can be used

Statistical Methods for Physical Science , 1994-12-13 This volume of Methods of Experimental Physics provides an extensive introduction to probability and statistics in many areas of the physical sciences with an emphasis on the emerging area of spatial statistics The scope of topics covered is wide ranging the text discusses a variety of the most commonly used classical methods and addresses newer methods that are applicable or potentially important The chapter authors motivate readers with their insightful discussions Examines basic probability including coverage of standard distributions time series models and Monte Carlo methods Describes statistical methods including basic inference goodness of fit maximum likelihood and least squares Addresses time series analysis including filtering and spectral analysis Includes simulations of physical experiments Features applications of statistics to atmospheric physics and radio astronomy Covers the increasingly important area of modern statistical computing

Handbook of Fourier Transform Raman and Infrared Spectra of Polymers A.H. Kuptsov, G.N. Zhizhin, 1998-10-29 A collection of infrared and Raman spectra of 500 natural and synthetic polymers of industrial importance is presented in this book A large variety of compounds are included starting with linear polyolefins and finishing with complex biopolymers and related compounds The spectra were registered using Infrared Fourier Transform Spectrometers in the laboratory of the All Russia Institute of Forensic Sciences The IR and Raman spectra are presented together on the same sheet The accompanying data include general and structure formulae CAS register numbers and sample preparation conditions Features of this book Continues the long tradition of publishing specific and standard data of new chemical compounds For low molecular weight substances complementary IR and Raman spectra are featured on the same sample and printed on the same page This fingerprint data allows the substance of the sample to be identified without doubt An important feature of this unique collection of data is the increase in the identification precision of unknown substances Peak tables are available in digital ASCII format on a diskette delivered with the book This allows the user to search for unknowns All the spectra in the collection are base line corrected This book will be of interest to scientists involved in the synthesis of new polymeric materials polymer identification and quality control Libraries of scientific institutes research centers and universities involved in vibrational spectroscopy will also find this

,1940      *Road from Geochemistry to Geochemometrics* Surendra P. Verma,2019-08-16 This book highlights major problems in the statistical analysis of compositions that have been known for over a century as well as the corresponding solutions that have been put forward by specialists over the past 30 years The basic assumptions of normality or multi normality are pointed out and methods to test and achieve them are also covered The conventional major and trace element geochemistry and modeling equations are discussed and are followed by a more sophisticated multidimensional approach to data handling The book s main focus is on the use of statistical techniques to facilitate data interpretation It also highlights the classification or nomenclature and tectonic discrimination aspects for both igneous and sedimentary rocks The book concludes by discussing computer programs that are helping pave the way from geochemistry to geochemometrics Written by a leading expert in the area of geochemistry it offers a valuable guide for students and professionals in the area
