Sciences Xiaofeng Steven Liu, 2013-11-07 This is the first book to demonstrate the application of power analysis to the newer more advanced statistical techniques that are increasingly used in the social and behavioral sciences Both basic and advanced designs are covered Readers are shown how to apply power analysis to techniques such as hierarchical linear

modeling meta analysis and structural equation modeling Each chapter opens with a review of the statistical procedure and then proceeds to derive the power functions This is followed by examples that demonstrate how to produce power tables and charts The book clearly shows how to calculate power by providing open code for every design and procedure in R SAS and SPSS Readers can verify the power computation using the computer programs on the book s website There is a growing requirement to include power analysis to justify sample sizes in grant proposals Most chapters are self standing and can be read in any order without much disruption This book will help readers do just that Sample computer code in R SPSS and SAS at www.routledge.com/9781848729810 are written to tabulate power values and produce power curves that can be included in a grant proposal Organized according to various techniques chapters 1 3 introduce the basics of statistical power and sample size issues including the historical origin hypothesis testing and the use of statistical power in t tests and confidence intervals Chapters 4 6 cover common statistical procedures analysis of variance linear regression both simple regression and multiple regression correlation analysis of covariance and multivariate analysis Chapters 7 11 review the new statistical procedures multi level models meta analysis structural equation models and longitudinal studies The appendixes contain a tutorial about R and show the statistical theory of power analysis Intended as a supplement for graduate courses on quantitative methods multivariate statistics hierarchical linear modeling HLM and or multilevel modeling and SEM taught in psychology education human development nursing and social and life sciences this is the first text on statistical power for advanced procedures Researchers and practitioners in these fields also appreciate the book s unique coverage of the use of statistical power analysis to determine sample size in planning a study A prerequisite of basic through multivariate statistics is assumed

Statistical Reasoning for the Behavioral Sciences Richard J. Shavelson,1996 According to Richard Shavelson the goal of any good statistics book is for readers not only to learn the meaning of statistical concepts but also to be able to use these concepts to solve problems This new revised edition of Statistical Reasoning is written with a two pronged objective conceptual and procedural knowledge of statistics Extensive use of verbal as well as visual exposition and an uncommonly wide use of figures that parallel what is being explained in the text aids the learning process and provides in the author s words a motion picture of the concepts at work In addition the book motivates the study of statistics with research design in areas such as psychology education and sociology and illustrates the usefulness of statistics for research in these fields

Statistics by Simulation Carsten F. Dormann,Aaron M. Ellison,2025-06-03 An accessible guide to understanding statistics using simulations with examples from a range of scientific disciplines Real world challenges such as small sample sizes skewed distributions of data biased sampling designs and more predictors than data points are pushing the limits of classical statistical analysis This textbook provides a new tool for the statistical toolkit data simulations It shows that using simulation and data generating models is an excellent way to validate statistical reasoning and to augment study design and statistical analysis with planning and

visualization Although data simulations are not new to professional statisticians *Statistics by Simulation* makes the approach accessible to a broader audience with examples from many fields It introduces the reasoning behind data simulation and then shows how to apply it in planning experiments or observational studies developing analytical workflows deploying model diagnostics and developing new indices and statistical methods Covers all steps of statistical practice from planning projects to post hoc analysis and model checking Provides examples from disciplines including sociology psychology ecology economics physics and medicine Includes R code for all examples with data and code freely available online Offers bullet point outlines and summaries of each chapter Minimizes the use of jargon and requires only basic statistical background and skills
