A Comparative Review of Statistical Software Ivor Francis, 1977 Critics, Ratings, and Society Grant Blank, 2006-10-10 How do we make choices in an information saturated world Prior studies often assume that the problem is coping with the volume of information They rarely ask how people judge the validity of new information But we are all forced to depend on secondary sources that no one has the time or resources to verify In *Critics Ratings and Society* Grant Blank confronts these issues through an investigation of independent evaluations and reviews Reviews are widespread they rank products ranging from books and films to automobiles and computers They are important not just because they influence success and failure of products they also make or break reputations and careers and often play a critical role in stratification power and status Reviews are shaped by the interaction of media editors product makers and consumers into credible cultural objects These are processed into two types of rating systems connoisseurial reviews that depend on the unique skills and experience of a single reviewer a connoisseur and procedural reviews that are based on the results of tests well defined procedures that allow reviewers to rank groups of similar products Both rating systems construct hierarchies of products Blank develops a new theory explaining the circumstances where economic concerns like price are overshadowed by review constructed hierarchies When this happens culture constructs markets He argues that review constructed hierarchies are widespread as a consequence of inherent structural characteristics of contemporary capitalism and as a result reviews will become more important in the future **Statistical Reporter** , 1980 *Report to Federal Statistical Agencies* United States. Nagel, 1989-09-26 The use of microcomputers as decision aids in law practice is increasing rapidly Nagel here shows how developments in software over the last few years are making microcomputers practically indispensable to lawyers as decision aids This is in contrast to his earlier book on *Microcomputers as Decision Aids in Law Practice* It dealt speculatively with ways in which decision aiding software could be used by lawyers for judicial prediction litigation strategy allocating scarce resources and negotiation mediation The book is divided into three parts covering general developments specific lawyer skills and application to all fields of law The first part previews various uses of decision aiding software by practicing lawyers including a general

discussion of the potential and actual benefits of such software How decision aiding software enhances specific lawyer skills comprises the second and largest part of the work Among the topics discussed are computer aided counseling computer aided mediation legal policy evaluation and computer aided advocacy law prediction and legal administration In the third part Nagel assesses applications of decision aiding software to all fields of law with an emphasis on contracts property torts family law criminal law constitutional law economic regulation international law civil procedure and criminal procedure In a provocative concluding chapter he deals with the thorny issues of individual ethics and professional responsibility in the context of microcomputers Because decision aiding software encourages decision makers to be much more explicit about their goals than they otherwise would be its use raises questions as to whose goals should be pursued and to what degree This is a nuts and bolts guidebook that will be a valuable tool for practicing attorneys with some knowledge of microcomputers and is recommended reading for legal scholars and law students
