Business Second Edition responds to the growing recognition that we must change the way business statistics is taught. It shows how statistics is important in all aspects of business and equips students with the skills they need to make sensible use of data and other information. The authors take an interactive scenario based approach and use almost no mathematical formulas, opting to use Excel for the technical work. This allows them to focus on using statistics to aid decision making rather than how to perform routine calculations. New in the Second Edition: A completely revised chapter on forecasting; Re-arrangement of the material on data presentation with the inclusion of histograms and cumulative line plots; A more thorough discussion of the analysis of attribute data; Coverage of variable selection and model building in multiple regression; End of chapter summaries; More end of chapter problems; A variety of case studies throughout the book. The second edition also comes with a wealth of ancillary materials provided on a CD ROM packaged with the book. These include automatically marked multiple choice questions, answers to questions in the text, data sets, Excel experiments and demonstrations, an introduction to Excel and the Stibstat Add In for stem and leaf plots, box plots, distribution plots, control charts and summary statistics. Solutions to end of chapter exercises and powerpoint slides for lecturers are available directly from the publisher.

Design of Experiments for Engineers and Scientists Jiju Antony, 2023-06-02 This third edition of Design of Experiments for Engineers and Scientists adds to the tried and trusted tools that were successful in so many engineering organizations with new coverage of design of experiments (DoE) in the service sector. Case studies are updated throughout and new ones are added on dentistry, higher education and utilities. Although many books have been written on DoE for statisticians, this book overcomes the challenges a wider audience faces in using statistics by using easy to read graphical tools. Readers will find the concepts in this book both familiar and easy to understand and users will soon be able to apply them in their work or research. This classic book is essential reading for engineers and scientists from all disciplines tackling all kinds of product and process quality problems and will be an ideal resource for students of this topic. Written in nonstatistical language, the book is an essential and accessible text for scientists and engineers who want to learn how to use DoE. Explains why teaching DoE techniques in the improvement phase of Six Sigma is an important part of problem solving methodology. New edition includes two new chapters on DoE for services as well as case studies illustrating its wider application in the service industry.

Semantic Technologies in Idea Management Systems: A Model for Interoperability, Linking and Filtering, Idea Management Systems are web applications that implement the notion of open innovation through crowdsourcing. Typically organizations use those kind of systems to connect to large communities in order to gather ideas for improvement of products or services. Originating from simple suggestion boxes, Idea Management Systems advanced beyond collecting ideas and aspire to be a knowledge management solution capable to select best ideas via collaborative as well as expert assessment methods. In practice however the contemporary systems still face a number of problems usually related to information overflow and recognizing questionable quality of submissions with reasonable time and effort allocation. This thesis focuses on idea assessment problem area and contributes a number of solutions that allow to filter, compare and evaluate ideas submitted into an Idea Management System. With respect to Idea Management System interoperability, the thesis proposes theoretical model of Idea Life Cycle and formalizes it as the Gi2MO ontology which enables to go beyond the boundaries of a single system to compare and assess innovation in an organization wide or market wide context. Furthermore, based on the ontology, the thesis builds a number of solutions for improving idea assessment via community opinion analysis, MARL annotation of idea characteristics, Gi2MO Types and study of idea relationships, Gi2MO Links. The main achievements of the thesis are application of theoretical innovation models for practice of Idea Management to successfully recognize the differentiation between communities, opinion metrics and their recognition as a new tool for idea assessment, discovery of new relationship types between ideas and their impact on idea clustering. Finally, the thesis outcome is establishment of Gi2MO Project that serves as an incubator.
