**Evaluating Social Work Services and Programs** Robert W. Weinbach, 2005 Program Evaluation uses a practical reader friendly approach to de mystify evaluation research clarifying evaluation's relationship to social work practice and providing the knowledge necessary to conduct it This book assumes some familiarity with traditional research methods and basic statistics or are currently studying them It contains all necessary definitions and brief explanations of essential research terminology and concepts However it relates them directly to their usage in evaluation research which is often quite different from the way they are used in traditional research Well organized with excellent flow from chapter to chapter Program Evaluation does not read like a research methods book making it the most accessible book on evaluation research available

**Analyzing Single System Design Data** William Nugent, 2010 Single system or single case design studies are a convenient method for evaluating practice allowing professionals to track clients response to treatment and change over time They also allow researchers to gather data where it might be difficult to conduct a study involving treatment and control groups in a school setting or a community mental health agency for example random assignment may be impossible whereas individual student or client progress across time can be more easily monitored This pocket guide reviews a wide range of

techniques for analyzing single system design data including visual analysis methods graphical methods and statistical methods From basic visual observation to complex ARIMA statistical models for use with interrupted time series designs numerous data analysis methods are described and illustrated in this unique and handy book The author frankly describes limitations and strengths of the data analysis methods so that readers can select an appropriate method and use the results responsibly in order to improve practice and client well being This accessible yet in depth introduction will serve as a highly practical resource for doctoral students and researchers alike

**Social Work Research and Evaluation** Richard M.

Grinnell,Yvonne A. Unrau,2005 This book is the longest standing and most widely adopted text in the field of social work research and evaluation Since the first edition in 1981 it has been designed to provide beginning social work students the basic methodological foundation they need in order to successfully complete more advanced research courses that focus on single system designs or program evaluations Its content is explained in extraordinarily clear everyday language which is then illustrated with social work examples that social work students not only can understand but appreciate as well Many of the examples concern women and minorities and special emphasis is given to the application of research methods to the study of these groups Without a doubt the major strength of this book is that it is written by social workers for social work students The editors have once again secured an excellent and diverse group of social work research educators The 31 contributors know firsthand from their own extensive teaching and practice experiences what social work students need to know in relation to research They have subjected themselves to a discipline totally uncommon in compendia that is writing in terms of what is most needed for an integrated basic research methods book rather than writing in line with their own predilections

*Making Your Case* Charles Auerbach,Wendy Zeitlin,2015-06-04 This book introduces readers to R a freely available statistical language to conduct program evaluations The book uses case studies to illustrate techniques that include data description and visualization bivariate analysis simple and multiple regression and logistic regression There is a comprehensive example using The Clinical Record as a data repository
