Creighton, 2012-12-06 Welcome to new territory A course in probability models and statistical inference The concept of probability is not new to you of course You've encountered it since childhood in games of chance card games for example or games with dice or coins And you know about the 90% chance of rain from weather reports But once you get beyond simple expressions of probability into more subtle analysis it's new territory And very foreign territory it is You must have encountered reports of statistical results in voter surveys opinion polls and other such studies but how are conclusions from those studies obtained How can you interview just a few voters the day before an election and still determine fairly closely how HUNDREDS of THOUSANDS of voters will vote That's statistics You'll find it very interesting during this first course to see how a properly designed statistical study can achieve so much knowledge from such drastically incomplete information It

really is possible statistics works But HOW does it work By the end of this course you ll have understood that and much more
