**Plant Conservation and Biodiversity** David L. Hawksworth, Alan T. Bull, 2007-09-18 Non timber forest products NTFP hold economic and cultural significance for millions of people across the globe For instance hundreds of millions of rural peoples currently derive a significant portion of both their subsistence needs and cash income from gathered plant and animal products Iqbal 1993 Vedeld et al 2004 Thousands of wild NTFP are also harvested for local use in other cultural and religious activities such as rituals ceremonies and dances e g FAO 1991 A growing body of literature has illustrated that NTFP harvest can have ecological consequences at multiple ecological scales and that demographic responses to harvest are heavily influenced by harvesting practices see review by Ticktin 2004 However although many NTFP are harvested from disturbed habitats and subject to multiple pressures Cunningham 2001 few quantitative studies have addressed this issue For example a small number of studies have assessed the demographic effects of NTFP management practices in the context of browsing or grazing Endress et al 2004b Ghimire et al 2005 or human induced re Ticktin 2005 Nonetheless the demographic consequences of NTFP harvest and management in the context of other disturbance factors such as alien invasive species have not been addressed to date

*Microorganisms in Plant Conservation and Biodiversity* K. Sivasithamparam, K.W. Dixon, R.L. Barrett, 2007-05-08 Plant conservation is increasingly recognised as an outstanding global priority yet despite considerable efforts over the last few decades the number of threatened species continues to rise The practice of plant conservation has for too long been a rather hit or miss mixture of methods While microorganisms have been recognised as a crucial and essential element in supporting the lifecycles of plant species there has been limited recognition of the relationships between macro level conservation facilitating ecosystem functioning at the micro level This book addresses the role of microorganisms in conservation both their support functions and deleterious roles in ecosystem processes and species survival Importantly a number of authors highlight how microbial diversity is itself now under threat from the many and pervasive influences of man What is clear from this volume is that like many contemporary treatments of plant and animal conservation the solution to mitigate the erosion of biodiversity is not simple This book represents an attempt to bring to the fore the ecological underwriting provided by microorganisms      **The Chinese garden flora** Hongwen Huang, 2022-01-13 T00:00:00+01:00 Living plant collection and ex situ conservation are not only the core mission of modern botanical gardens but also the basis of the scientific mission of botanical gardens and the responsibility to safeguard plant diversity by botanical community The Ex situ Flora of China is a multi decade project which has made significant achievements and aroused public interest Based on the latest progress of the project this book provides up to date summary and resources of ex situ plant conservation worldwide and mainly in China The book includes four major parts 1 Overview of Botanical Garden Based Research 2 World Garden Flora 3 Ex situ Flora of China 4 Introduction to 312 Families of Angiospermae Gymnospermae and Pteridophyta This book will greatly benefit global ex situ conservation and provide valuable information to serve agriculture forestry horticulture and medicinal plant industries      **World Plant Conservation Bibliography** Royal Botanic Gardens, Kew, 1990 A very comprehensive bibliographical reference to international national and local literature on plant conservation with over 10 000 references arranged by country A standard reference tool for anyone dealing with any aspect of plant conservation
