The diagram illustrates a systematic approach to future land use planning. It begins with a central goal, 'Future Land Use Planning', which branches into three primary data collection domains: Geological, Topographical, and Geophysical. Each domain is associated with specific field and analytical techniques. Geological data is gathered through field surveys, cross-sections, and subsurface logs. Topographical data is collected via 2D and 3D mapping. Geophysical data is obtained through seismic refraction, GPR, and resistivity surveys. All three data streams feed into a comprehensive 'Environment and Subsurface Diagnosis'. This diagnosis then informs the creation of 'Optimal Land Use Planning', which ultimately leads to the goal of 'Sustainability'.
