Specification And Analysis Of Concurrent Systems:

Specification and Analysis of Concurrent Systems Ryszard Janicki, Peter E. Lauer, 2012-12-06 Concurrent systems abound in human experience but their fully adequate conceptualization as yet eludes our most able thinkers The COSY ConcurrentSystem notation and theory was developed in the last decade as one of a number of mathematical approaches for conceptualizing and analyzing concurrent and reactive systems The COSY approach extends the conventional notions of grammar and automaton from formal language and automata theory to collections of synchronized grammars and automata permitting system specification and analysis of true concurrency without reduction to non determinism COSY theory is developed to a great level of detail and constitutes the first uniform and self contained presentation of all results about COSY published in the past as well as including many new results COSY theory is used to analyze a sufficient number of typical problems involving concurrency synchronization and scheduling to allow the reader to apply the techniques presented to similar problems The COSY model is also related to many alternative models of concurrency particularly Petri Nets Communicating Sequential Processes and the Calculus of Communicating Systems

Specification and Verification of Concurrent Systems Charles Rattray, 2013-11-11 This volume contains papers presented at the BCS FACS Workshop on Specification and Verification of Concurrent Systems held on 6-8 July 1988 at the University of Stirling, Scotland. Specification and verification techniques are playing an increasingly important role in the design and production of practical concurrent systems. The wider application of these techniques serves to identify difficult problems that require new approaches to their solution and further developments in specification and verification. The Workshop aimed to capture this interplay by providing a forum for the exchange of the experience of academic and industrial experts in the field. Presentations included surveys, original research, practical experience with methods, tools and environments in the following or related areas: Object oriented process, data and logic based models and specification methods for concurrent systems; Verification of concurrent systems; Tools and environments for the analysis of concurrent systems; Applications of specification languages to practical concurrent system design and development. We should like to thank the invited speakers and all the authors of the papers whose work contributed to making the Workshop such a success. We were particularly pleased with the international response to our call for papers. Invited Speakers: Pierre America, Philips Research Laboratories, University of Warwick; Professor M. Joseph David Freestone, British Telecom Organising Committee; Charles Rattray, Dr. Muffy Thomas, Dr. Simon Jones, Dr. John Cooke, Professor Ken Turner, Derek Coleman, Maurice Naftalin, Dr. Peter Scharbach. vi Preface: We would like to acknowledge the financial contribution made by SD Systems Designers pie, Camberley, Surrey.
