$$\Delta e = \lambda e$$

Weyl's law

$$0 = \lambda_0 \leq \lambda_1 \leq \lambda_2 \leq \dots$$

Cannot hear the full shape but can hear  
**dimension, area, etc.** Can also hear

**Spectral Theory in Riemannian Geometry** ,2015 *Spectral Theory and Geometry* E. Brian Davies,Yu Safarov,London Mathematical Society,International Centre for Mathematical Sciences,1999-09-30 This volume brings together lectures from an instructional meeting on spectral theory and geometry held under the auspices of the International Centre for Mathematical Sciences in Edinburgh The contributions here come from world experts and many are much expanded versions of the lectures they gave Together they survey the core material and go beyond to reach deeper results For graduate students and experts alike this book will be a highly useful resource

**Spectral Theory and Analytic Geometry Over Non-Archimedean Fields** Vladimir G. Berkovich,1990 The purpose of this book is to introduce a new notion of analytic space over a non Archimedean field Despite the total disconnectedness of the ground field these analytic spaces have the usual topological properties of a complex analytic space such as local compactness and local arcwise connectedness This makes it possible to apply the usual notions of homotopy and singular homology The book includes a homotopic characterization of the analytic spaces associated with certain classes of algebraic varieties and an interpretation of Bruhat Tits buildings in terms of these analytic spaces The author also studies the connection with the earlier notion of a rigid analytic space Geometrical considerations are used to obtain some applications and the analytic spaces are used to construct the foundations of a non Archimedean spectral theory of bounded linear operators This book requires a background at the level of basic graduate courses in algebra and topology as well as some familiarity with algebraic geometry It would be of interest to research mathematicians and graduate students working in algebraic geometry number theory and p adic analysis

**Spectral Geometry** Pierre H. Berard, 2006-11-14 [On Some Aspects of Oscillation Theory and Geometry](#) Bruno Bianchini, 2014-09-11 The aim of this paper is to analyze some of the relationships between oscillation theory for linear ordinary differential equations on the real line shortly ODE and the geometry of complete Riemannian manifolds With this motivation we prove some new results in both directions ranging from oscillation and nonoscillation conditions for ODE s that improve on classical criteria to estimates in the spectral theory of some geometric differential operator on Riemannian manifolds with related topological and geometric applications To keep our investigation basically self contained we also collect some more or less known material which often appears in the literature in various forms and for which we give in some instances new proofs according to our specific point of view Page v **Spectral Geometry** Alex Barnett, 2012 This volume contains the proceedings of the International Conference on Spectral Geometry held July 19 23 2010 at Dartmouth College Dartmouth New Hampshire Eigenvalue problems involving the Laplace operator on manifolds have proven to be a consistently fertile area of geometric analysis with deep connections to number theory physics and applied mathematics Key questions include the measures to which eigenfunctions of the Laplacian on a Riemannian manifold condense in the limit of large eigenvalue and the extent to which the eigenvalues and eigenfunctions of a manifold encode its geometry In this volume research and expository articles including those of the plenary speakers Peter Sarnak and Victor Guillemin address the flurry of recent progress in such areas as quantum unique ergodicity isospectrality semiclassical measures the geometry of nodal lines of eigenfunctions methods of numerical computation and spectra of quantum graphs This volume also contains mini courses on spectral theory for hyperbolic surfaces semiclassical analysis and orbifold spectral geometry that prepared the participants especially graduate students and young researchers for conference lectures **Geometric and Arithmetic Methods in the Spectral Theory of Multidimensional Periodic Operators** M. **Geometric and Computational Spectral Theory**

Alexandre Girouard, 2017 The book is a collection of lecture notes and survey papers based on the mini courses given by leading experts at the 2015 Séminaire de Mathématiques Supérieures on Geometric and Computational Spectral Theory held from June 15–26, 2015 at the Centre de Recherches Mathématiques Université de Montréal Montréal, Québec, Canada. The volume covers a broad variety of topics in spectral theory highlighting its connections to differential geometry, mathematical physics and numerical analysis bringing together the theoretical and computational approaches to spectral theory and emphasizing the interplay between the two. *Manifolds with Cusps of Rank One* Werner Müller, 2006-11-15 The manifolds investigated in this monograph are generalizations of XX rank one locally symmetric spaces. In the first part of the book the author develops spectral theory for the differential Laplacian operator associated to the so called generalized Dirac operators on manifolds with cusps of rank one. This includes the case of spinor Laplacians on XX rank one locally symmetric spaces. The time dependent approach to scattering theory is taken to derive the main results about the spectral resolution of these operators. The second part of the book deals with the derivation of an index formula for generalized Dirac operators on manifolds with cusps of rank one. This index formula is used to prove a conjecture of Hirzebruch concerning the relation of signature defects of cusps of Hilbert modular varieties and special values of L series. This book is intended for readers working in the field of automorphic forms and analysis on non compact Riemannian manifolds and assumes a knowledge of PDE scattering theory and harmonic analysis on semisimple Lie groups.

line from the spectral data Finally a Jacobi variety and Abel map for the spectral curve are constructed and used to describe the change of the spectral data under translation of the solution  $u$  The book's primary audience will be research mathematicians interested in the theory of infinite dimensional integrable systems or in the geometry of constant mean curvature surfaces **Integrable Hamiltonian systems and spectral theory** Jürgen Moser, 1983-10-01 These notes are based on six Fermi Lectures held at the Scuola Normale Superiore in Pisa in March and April 1981 The topics treated depend on basic concepts of classical mechanics elementary geometry complex analysis as well as spectral theory and are meant for mathematicians and theoretical physicists alike These lectures weave together a number of threads from various fields of mathematics impinging on the subject of inverse spectral theory I did not try to give an overview over this fast moving subject but rather tie various aspects together by one guiding theme the construction of all potentials for the one dimensional Schrödinger equation which gives rise to finite band potentials which is done by reducing it to solving a system of differential equations In fact we will see that the problem of finding all almost periodic potentials having finitely many intervals as its spectrum is equivalent to the study of the geodesics on an ellipsoid To make this connection clear we have carried together several facts from classical mechanics and from spectral theory and we give a self contained exposition of the construction of these finite band potentials
