Stationary Processes And Prediction Theory Annals Of Mathematical Studies Number 44:

Ergodic Theory and Dynamical Systems Idris Assani, 2013-12-12 This is the proceedings of the workshop on recent developments in ergodic theory and dynamical systems on March 2011 and March 2012 at the University of North Carolina at Chapel Hill The articles in this volume cover several aspects of vibrant research in ergodic theory and dynamical systems It contains contributions to Teichmüller dynamics interval exchange transformations continued fractions return times averages Furstenberg Fractals fractal geometry of non uniformly hyperbolic horseshoes convergence along the sequence of squares adic and horocycle flows and topological flows These contributions illustrate the connections between ergodic theory and dynamical systems number theory harmonic analysis probability and algebra Two surveys are included which give a nice introduction for interested young or senior researcher to some active research areas Overall this volume provides a very useful blend of techniques and methods as well as directions of research on general convergence phenomena in ergodic theory and dynamical systems

Single Orbit Dynamics Benjamin Weiss, 2000 This book presents the expanded notes from ten lectures given by the author at the NSF CBMS conference held at California State University Bakersfield The author describes what he calls single orbit dynamics which is an approach to the analysis of dynamical systems via the study of single orbits rather than the study of a system as a whole He presents single orbit interpretations of several areas of topological dynamics and ergodic theory and some new applications of dynamics to graph theory In the concluding lectures single orbit approaches to generalizations of the Shannon Breiman McMillan theorem and related problems of compression and universal coding are presented Complete proofs and illuminating discussions are included and references for further study are given Some of the material appears here for the first time in print

Substitution and Tiling Dynamics:

Introduction to Self-inducing Structures Shigeki Akiyama, Pierre Arnoux, 2020-12-05 This book presents a panorama of recent developments in the theory of tilings and related dynamical systems It contains an expanded version of courses given in 2017 at the research school associated with the Jean Morlet chair program Tilings have been designed used and studied for centuries in various contexts This field grew significantly after the discovery of aperiodic self similar tilings in the 60s linked to the proof of the undecidability of the Domino problem and was driven further by Dan Shechtman's discovery of quasicrystals in 1984 Tiling problems establish a bridge between the mutually influential fields of geometry dynamical systems aperiodic order computer science number theory algebra and logic The main properties of tiling dynamical systems are covered with expositions on recent results in self similarity and its generalizations fusion rules and S-adic systems algebraic developments connected to physics games and undecidability questions and the spectrum of substitution tilings
