Statistical Challenges in Modern Astronomy II G. Jogesh Babu, Eric D. Feigelson, 2012-12-06 Modern astronomical research faces a vast range of statistical issues which have spawned a revival in methodological activity among astronomers. The Statistical Challenges in Modern Astronomy II conference held in June 1996 at the Pennsylvania State University five years after the first conference brought astronomers and statisticians together to discuss methodological issues of common interest. Time series analysis, image analysis, Bayesian methods, Poisson processes, nonlinear regression, maximum likelihood, multivariate classification, and wavelet and multiscale analyses were important themes. Astronomers frequently encounter troublesome situations such as heteroscedastic weighting of data, unevenly spaced time series, and selection effects leading to censoring and truncation. Many problems were introduced at the conference in the context of large scale astronomical projects including LIGO, AXAF, XTE, Hipparcos, and digitized sky surveys. This volume will be of interest to researchers and advanced students in both fields: astronomers who seek exposure to recent developments in statistics and statisticians interested in confronting new problems. It is edited by two faculty members of the Pennsylvania State University who have a long standing cross disciplinary collaboration and jointly authored the recent introductory monograph *Astrostatistics*. G. J. Babu is Professor of Statistics, Fellow of the Institute of Mathematical Statistics, and Associate Editor of the *Journal of Statistical Planning, Inference* and the *Journal of Nonparametric Statistics*. Eric D. Feigelson is Professor of Astronomy and Astrophysics. *Bulletin of the United States Bureau of Labor Statistics*, 1968 Data Analysis in Astronomy V. di Gesù, L. Scarsi, P. Crane, J. H. Friedman, S. Levialdi, 2012-12-06 The international Workshop on Data Analysis in Astronomy was intended to give a presentation of experiences that have been acquired in data analysis and image processing developments and applications that are steadily growing up in Astronomy. The quality and the quantity of ground and satellite observations require more sophisticated data analysis methods and better computational tools. The Workshop has reviewed the present state of the art, explored new methods, and discussed a wide range of applications. The topics which have been selected have covered the main fields of interest for data analysis in Astronomy. The Workshop has been focused on the methods used and their significant applications. Results which gave a major contribution to the physical interpretation of the data have been stressed in the presentations. Attention has been devoted to the description of operational systems for data analysis in astronomy. The success of the meeting has been the result of the coordinated effort of several people from the organizers to those who presented a contribution and/or took part in the discussion. We wish to thank the members of the Workshop scientific committee: Prof. M. Cappacioli, Prof. G. De Biase, Prof. G. Sedmak, Prof. A. Zichichi, and of the local organizing committee: Dr. R. Buccheri and Dr. M. C. Maccaione together with Miss P. Savalli and Dr. A. Gabriele.
