Statistical Analysis of Environmental Space-Time

Processes Nhu D. Le, James V. Zidek, 2006-09-13 This book presents knowledge gained by the authors along with methods they developed over more than 30 years of experience measuring modeling and mapping environmental space time fields That experience embraces both large continentwide spatial domains and small In part it comes from their research working with students as well as coinvestigators But much was gained from all sorts of interactions with many individuals who have had to contend with the challenges these fields present They include statistical as well as subject area scientists in areas as diverse as analytical chemistry air sampling atmospheric science environmental epidemiology environmental risk management and occupational health among others We have collaborated and consulted with government scientists as well as policy makers in all a large group of individuals from whom we have learned a lot and to whom we are indebted We hope all in these diverse groups will find something of value in this book We believe it will also benefit graduate students both in statistics and subject areas who must deal with the analysis of environmental fields In fact we have given a successful statistics graduate course based on it The book and course reflect our conviction about the need for statistical scientists to learn about the phenomena they purport to explain To the extent feasible we have covered important nonstatistical issues involved in dealing with environmental processes Thus in writing the book we have tried to strike a balance between important qualitative and quantitative aspects of the subject Much of the most technical statistical mathematical material has

been placed in the starred sections chapters and appendices **The Demographics of Empire** Karl Ittmann,Dennis D. Cordell,Gregory H. Maddox,2010-10-05 The Demographics of Empire is a collection of essays examining the multifaceted nature of the colonial science of demography in the last two centuries The contributing scholars of Africa and the British and French empires focus on three questions How have historians demographers and other social scientists understood colonial populations What were the demographic realities of African societies and how did they affect colonial systems of power Finally how did demographic theories developed in Europe shape policies and administrative structures in the colonies The essays approach the subject as either broad analyses of major demographic questions in Africa s history or focused case studies that demonstrate how particular historical circumstances in individual African societies contributed to differing levels of fertility mortality and migration Together the contributors to The Demographics of Empire question demographic orthodoxy and in particular the assumption that African societies in the past exhibited a single demographic regime characterized by high fertility and high mortality **Demographic Analysis** Roland Pressat,2020-10-11 Population control requires that the birth rate equal to the death rate If it is too low population will decline if it is too high population will increase If either condition persists long enough the population will diminish towards zero or increase towards infinity Fortunately the birth trajectory does not have to be set once and for all but can be adjusted within limits Since birth and death rates determine whether we are heading for population extinction or explosion they are well designated vital statistics Their understanding and use are a central theme of demographic analysis Demographic Analysis presents those techniques that are often called for in the study of demographic problems Such techniques permit researchers to fill the gap between the large amounts of data made available by censuses and the theoretical and practical questions that need to be answered the techniques of this book effectively bring the data into confrontation with the problems In his treatment of population projection Pressat applies methods developed in earlier sections for mortality arid fertility The emphasis is on population projection and accords with its usefulness in demographic analysis The meaning of a demographic rate or trend is brought out by seeing to what condition it would lead if continued No assumption is made that the concrete future will follow either path The substance of the book is devoted to the main themes of mortality and fertility Underlying these as well as nearly every other kind of data with which the demographer deals is the problem of location in time the relation of vital events to the calendar and also to the age of the persons undergoing them Pressat s detailed attention to this problem forms a solid basis for how current methodology accounts of demographic changes **The History of East-Central European Eugenics, 1900-1945** Marius Turda,2015-08-27 The History of East Central European Eugenics 1900 1945 redefines the European history of eugenics by exploring the ideological transmission of eugenics internationally and its application locally in East Central Europe It includes 100 primary sources translated from the East Central European languages into English for the first time and key contributions from leading scholars in the field from around Europe This volume examines the main

eugenic organisations as well as individuals and policies that shaped eugenics in Austria Poland the former Czechoslovakia the former Yugoslavia Hungary and Romania It also explores the ways in which ethnic minorities interacted with national and international eugenics discourses to advance their own aims and ambitions whilst providing a comparative analysis of the emergence and development of eugenics in East Central Europe more generally Complete with a glossary of terms a list of all eugenic societies and journals from these countries as well as a comprehensive bibliography The History of East Central European Eugenics 1900 1945 is a pivotal reference work for students researchers and academics interested in East Central Europe and the history of science and national identity in the 20th century *Demography* Jay Weinstein, Vijayan K.
