**Probability and Bayesian Statistics** R. Viertl, 2012-12-06 This book contains selected and refereed contributions to the International Symposium on Probability and Bayesian Statistics which was organized to celebrate the 80th birthday of Professor Bruno de Finetti at his birthplace Innsbruck in Austria Since Professor de Finetti died in 1985 the symposium was dedicated to the memory of Bruno de Finetti and took place at Igls near Innsbruck from 23 to 26 September 1986 Some of the papers are published especially by the relationship to Bruno de Finetti's scientific work The evolution of stochastics shows growing importance of probability as coherent assessment of numerical values as degrees of belief in certain events This is the basis for Bayesian inference in the sense of modern statistics The contributions in this volume cover a broad spectrum ranging from foundations of probability across psychological aspects of formulating subjective probability statements abstract measure theoretical considerations contributions to theoretical statistics and stochastic processes to real applications in economics reliability and hydrology Also the question is raised if it is necessary to develop new techniques to model and analyze fuzzy observations in samples The articles are arranged in alphabetical order according to the family name of the first author of each paper to avoid a hierarchical ordering of importance of the different topics Readers interested in special topics can use the index at the end of the book as guide

**Perspectives in Quantum Theory** Alfred Landé,1971 Max Born Louis de Broglie Eugene Wigner Hermann Bondi Karl Popper and others of comparable stature here express their esteem for Alfred Lande and his lifelong dedication to his science in a particularly appropriate way by contributing to this book articles in which they operate at their deepest level of ongoing concern rather than by offering simple tributes or reminiscences No better salute could be accorded to a man who in his eighties continues to operate at such a level himself Some of the papers deal with the specific areas in which Lande made important contributions to the theory of atomic structure in his younger days such as the Lande g factor so important to spectral analysis Most of them however take up the larger issues of the nature of quantum reality and the consistency and completeness inherent in our descriptions of it Lande was an early supporter of the Copenhagen interpretation of quantum phenomena developed in the late 1920s by Bohr and Heisenberg This depends on a fundamental duality in which the wave like and particle like aspects of matter and radiation are each regarded as necessary but partial views of reality mutually complementing one another In his later years however Lande became increasingly dissatisfied with this interpretation and began to develop a unitary approach that does not depend on this dualism This was to lead to his demonstration that quantum theory instead of being a set of enigmatic though most successful rules of calculation can be understood as the logical consequence of a few almost self evident postulates of symmetry and invariance To Lande s own scientific conscience the quantum riddle has found its solution Even those who take a different point of view including some of the contributors to this book treat this solution with the respect its seriousness has earned The contributors and their topics are as follows Max Born An Open Letter to Alfred Lande Louis de Broglie A New Interpretation Concerning the Coexistence of Waves and Particles Hans Jurgen Treder The Einstein Bohr Box Experiment Eugene P Wigner Quantum Mechanical Distribution Functions Revisited Henry Margenau and James L Park The Logic of Noncommutability of Quantum Mechanical Operators and Its Empirical Consequences Alfred Kastler How the Lande Factor of an Atom Can Be Changed by Putting the Atom in a Radiofrequency Bath David Bohm Space Time Geometry as an Abstraction from Spinor Ordering Helmut Honl A Contribution to the Thermodynamics of the Universe and to 3K Radiation Dennis Caldwell and Henry Eyring Quantum Mechanical Rate
