incomplete information for oftentimes uncertain results In Decision Making Under Uncertainty Dr Chacko applies his years of statistical research and experience to the analysis of twenty four real life decision making situations both those with few data points eg Cuban Missile Crisis and many data points eg aspirin for heart attack prevention These situations encompass decision making in a variety of business social and political physical and biological and military environments Though different all of these have one characteristic in common their outcomes are uncertain unknown and unknowable Chacko Demonstrates how the decision maker can reduce uncertainty by choosing probable outcomes using the statistical methods he introduces This detailed volume develops standard statistical concepts t x^2 normal distribution ANOVA and the less familiar concepts logical probability subjective probability Bayesian Inference Penalty for Non Fulfillment Bluff Threats Matrix etc Chacko also offers a thorough discussion of the underlying theoretical principles The end of each chapter contains a set of questions three quarters of which focus on concepts formulation conclusion resource commitments and caveats only one quarter with computations Ideal for the practitioner the work is also designed to serve as the primary text for graduate or advanced undergraduate courses in statistics and decision science

Frontiers of Statistical Decision Making and Bayesian Analysis Ming-Hui Chen, Peter Müller, Dongchu Sun, Keying Ye, Dipak K. Dey, 2010-07-24 Research in Bayesian analysis and statistical decision theory is rapidly expanding and diversifying making it increasingly more difficult for any single researcher to stay up to date on all current research frontiers This book provides a review of current research challenges and opportunities While the book can not exhaustively cover all current research areas it does include some exemplary discussion of most research frontiers Topics include objective Bayesian inference shrinkage estimation and other decision based estimation model selection and testing nonparametric Bayes the interface of Bayesian and frequentist inference data mining and machine learning methods for categorical and spatio temporal data analysis and posterior simulation methods Several major application areas are covered computer models Bayesian clinical trial design epidemiology phylogenetics bioinformatics

climate modeling and applications in political science finance and marketing As a review of current research in Bayesian analysis the book presents a balance between theory and applications The lack of a clear demarcation between theoretical and applied research is a reflection of the highly interdisciplinary and often applied nature of research in Bayesian statistics The book is intended as an update for researchers in Bayesian statistics including non statisticians who make use of Bayesian inference to address substantive research questions in other fields It would also be useful for graduate students and research scholars in statistics or biostatistics who wish to acquaint themselves with current research frontiers *Business Analytics*
