**Statistical Methods for Survival Trial Design** Jianrong Wu, 2018-06-14. Statistical Methods for Survival Trial Design With Applications to Cancer Clinical Trials Using R provides a thorough presentation of the principles of designing and monitoring cancer clinical trials in which time to event is the primary endpoint. Traditional cancer trial designs with time to event endpoints are often limited to the exponential model or proportional hazards model. In practice, however, those model assumptions may not be satisfied for long term survival trials. This book is the first to cover comprehensively the many newly developed methodologies for survival trial design including trial design under the Weibull survival models, extensions of the sample size calculations under the proportional hazard models, and trial design under mixture cure models, complex survival models, Cox regression models, and competing risk models. A general sequential procedure based on the sequential conditional probability ratio test is also implemented for survival trial monitoring. All methodologies are presented with sufficient detail for interested researchers or graduate students.

**Statistical Methods of Analysis** Chin Long Chiang, 2003 This textbook is related to a course that the author taught for many years at University of California Berkeley The course was originally intended for graduate students in the biological and health sciences But it attracted students from other departments on the campus as well In order for the book to serve the interest of a larger audience the author made revisions of the outline added new topics and provided more examples for illustrations wherever needed This invaluable book systematically presents fundamental methods of statistical analysis from basic probability and statistical distributions through fundamental concepts of statistical inference to a collection of methods of analysis useful for scientific research The text is rich in tables diagrams and examples in addition to theoretical justification of the methods of analysis introduced Each chapter has a section entitled Exercises and Problems to accompanying the text There are altogether about 300 exercises whose answers are given A section entitled Proof of the Results in This Chapter in each chapter provides interested readers with material for further study

**Fundamentals of Modern Statistical Methods** Rand R. Wilcox, 2013-11-21 Conventional statistical methods have a very serious flaw They routinely miss differences among groups or associations among variables that are detected by more modern techniques even under very small departures from normality Hundreds of journal articles have described the reasons standard techniques can be unsatisfactory but simple intuitive explanations are generally unavailable Improved methods have been derived but they are far from obvious or intuitive based on the training most researchers receive Situations arise where even highly nonsignificant results become significant when analyzed with more modern methods Without assuming any prior training in statistics Part I of this book describes basic statistical principles from a point of view that makes their shortcomings intuitive and easy to understand The emphasis is on verbal and graphical descriptions of concepts Part II describes modern methods that address the problems covered in Part I Using data from actual studies many examples are included to illustrate the practical problems with conventional procedures and how more modern methods can make a
