Statistical Process Monitoring Using Advanced Data-Driven and Deep Learning Approaches Fouzi Harrou,Ying Sun,Amanda S. Hering,Muddu Madakyaru,abdelkader Dairi,2020-07-03 Statistical Process Monitoring Using Advanced Data Driven and Deep Learning Approaches tackles multivariate challenges in process monitoring by merging the advantages of univariate and traditional multivariate techniques to enhance their performance and widen their practical applicability The book proceeds with merging the desirable properties of shallow learning approaches such as a one class support vector machine and k nearest neighbours and unsupervised deep learning approaches to develop more sophisticated and efficient monitoring techniques Finally the developed approaches are applied to monitor many processes such as waste water treatment plants detection of obstacles in driving environments for autonomous robots and vehicles robot swarm chemical processes continuous stirred tank reactor plug flow reactor and distillation columns ozone pollution road traffic congestion and solar photovoltaic systems Uses a data driven based approach to fault detection and attribution Provides an in depth understanding of fault detection and attribution in complex and multivariate systems Familiarises you with the most suitable data driven based techniques including multivariate statistical techniques and deep learning based methods Includes case studies and comparison of different methods

Mathematical and Statistical Methods in Food Science and Technology Daniel Granato,Gastón Ares,2014-03-03 Mathematical and Statistical Approaches in Food Science and Technology offers an accessible guide to applying statistical and mathematical technologies in the food science field whilst also addressing the theoretical foundations Using clear examples and case studies by way of practical illustration the book is more than just a theoretical guide for non statisticians and may therefore be used by scientists students and food industry professionals at different levels and with varying degrees of statistical skill

Stochastic Signal Processing Johann Frederic Böhme,Pei-Jung Chung,2012 This book intends to provide graduate students in electrical and information science a solid background in stochastic signal processing Chapter one introduces random signals through measurement noise Chapter two develops fundamental concepts in probability theory and statistical methods Chapter three is devoted to stochastic

processes stochastic system theory and statistical signal processing The examples are carefully selected Some of them are aimed at motivating students interested in advanced topics such as signal detection estimation spectral analysis and system identification Problems with solutions and MATLAB exercises are included to encourage self study by researchers or engineers in related areas The most important concepts in statistics are presented so that linear systems and nonlinear ones as rectifiers with random input and output signals have proper mathematical description and allow statistical inference Such systems are fundamental to many engineering areas for example electronics measurements communications and control
