## Statistical Regression With Measurement Error:

Statistical Regression with Measurement Error Chi-Lun Cheng, John W. Van Ness, 1998-07-14 This book explores measurement error models and discusses functional and structural models as well as the more general ultrastructural model. It offers an intermediate level survey of the field of measurement error models without too much mathematical detail making the book accessible to a wide range of readers.

*Statistical Regression with Measurement Error* Chi-Lun Cheng, John W. Van Ness, 2010-06-28 Providing a general survey of the theory of measurement error models including the functional structural and ultrastructural models this book is written in the style of the Kendall and Stuart Advanced Theory of Statistics set and like that series includes exercises at the end of the chapters. The goal is to emphasize the ideas and practical implications of the theory in a style that does not concentrate on the theorem proof format.

**Measurement Error in Nonlinear Models** Raymond J. Carroll, David Ruppert, Leonard A. Stefanski, Ciprian M. Crainiceanu, 2006-06-21 It has been over a decade since the first edition of *Measurement Error in Nonlinear Models* splashed onto the scene and research in the field has certainly not cooled in the interim. In fact quite the opposite has occurred. As a result *Measurement Error in Nonlinear Models: A Modern Perspective* Second Edition has been revamped and extended.

*Handbook of Measurement Error Models* Grace Y. Yi, Aureore Delaigle, Paul Gustafson, 2021-10-17 Measurement error arises ubiquitously in applications and has been of long standing concern in a variety of fields including medical research, epidemiological studies, economics, environmental studies, and survey research. While several research monographs are available to summarize methods and strategies of handling different measurement error problems, research in this area continues to attract extensive attention. The *Handbook of Measurement Error Models* provides overviews of various topics on measurement error problems. It collects carefully edited chapters concerning issues of measurement error and evolving statistical methods with a good balance of methodology and applications. It is prepared for readers who wish to start research and gain insights into challenges, methods, and applications related to error-prone data. It also serves as a reference text on statistical methods and applications pertinent to measurement error models for researchers and data analysts alike.

*Features:* Provides an account of past development and modern advancement concerning measurement error problems. Highlights the challenges induced by error-contaminated data. Introduces off-the-shelf methods for mitigating deleterious impacts of measurement error. Describes state-of-the-art strategies for conducting in-depth research.

Statistical Analysis with Measurement Error or Misclassification Grace Y. Yi, 2017-08-02 This monograph on measurement error and misclassification covers a broad range of problems and emphasizes unique features in modeling and analyzing problems arising from medical research and epidemiological studies. Many measurement error and misclassification problems have been addressed in various fields over the years as well as with a wide spectrum of data including event history data such as survival data and recurrent event data, correlated data such as longitudinal data and clustered data, multi-state event data, and data arising from case-control studies.

*Measurement Error and Misclassification in Statistics and Epidemiology* Paul Gustafson, 2003-09-25 Mismeasurement of explanatory variables is a common hazard when using statistical modeling techniques and particularly so in fields such as biostatistics and epidemiology where perceived risk factors cannot always be measured accurately With this perspective and a focus on both continuous and categorical variables *Measurement Error and Misclassification in Statistics and Epidemiology* Impacts and Bayesian Adjustments examines the consequences and Bayesian remedies in those cases where the explanatory variable cannot be measured with precision The author explores both measurement error in continuous variables and misclassification in discrete variables and shows how Bayesian methods might be used to allow for mismeasurement A broad range of topics from basic research to more complex concepts such as wrong model fitting make this a useful research work for practitioners students and researchers in biostatistics and epidemiology

*Measurement Error and Latent Variables in Econometrics* T. Wansbeek, E. Meijer, 2000-12-08 The book first discusses in depth various aspects of the well known inconsistency that arises when explanatory variables in a linear regression model are measured with error Despite this inconsistency the region where the true regression coefficients lies can sometimes be characterized in a useful way especially when bounds are known on the measurement error variance but also when such information is absent Wage discrimination with imperfect productivity measurement is discussed as an important special case Next it is shown that the inconsistency is not accidental but fundamental Due to an identification problem no consistent estimators may exist at all Additional information is desirable This information can be of various types One type is exact prior knowledge about functions of the parameters This leads to the CALS estimator Another major type is in the form of instrumental variables Many aspects of this are discussed including heteroskedasticity combination of data from different sources construction of instruments from the available data and the LIML estimator which is especially relevant when the instruments are weak The scope is then widened to an embedding of the regression equation with measurement error in a multiple equations setting

leading to the exploratory factor analysis EFA model This marks the step from measurement error to latent variables Estimation of the EFA model leads to an eigenvalue problem A variety of models is reviewed that involve eigenvalue problems as their common characteristic EFA is extended to confirmatory factor analysis CFA by including restrictions on the parameters of the factor analysis model and next by relating the factors to background variables These models are all structural equation models SEMs a very general and important class of models with the LISREL model as its best known representation encompassing almost all linear equation systems with latent variables Estimation of SEMs can be viewed as an application of the generalized method of moments GMM GMM in general and for SEM in particular is discussed at great length including the generality of GMM optimal weighting conditional moments continuous updating simulation estimation the link with the method of maximum likelihood and in particular testing and model evaluation for GMM The discussion concludes with nonlinear models The emphasis is on polynomial models and models that are nonlinear due to a filter on the dependent variables like discrete choice models or models with ordered categorical variables

**Measurement Error in Nonlinear Models** Sandra Nolte, 2010 This book analyzes how the choice of a particular disclosure limitation method namely additive and multiplicative measurement error affects the quality of the data and limits its usefulness for empirical research Generally a disclosure limitation method can be regarded as a data filter that transforms the true data generating process This book focuses explicitly on the consequences of additive and multiplicative measurement error for the properties of nonlinear econometric estimators It investigates the extent to which appropriate econometric techniques can yield consistent and unbiased estimates of the true data generating process in the case of disclosure limitation Sandra Nolte received her PhD in Economics at the University of Konstanz Germany in 2008 and is a postdoctoral researcher at the Financial Econometric Research Centre at the Warwick Business School UK since 2009 Her research areas include microeconometrics and financial econometrics
