Statistics For Spatial Data

Statistics For Spatial Data:

Statistics for Spatial Data Noel A. C. Cressie, 1993 The purpose of this book is to present statistics for spatial data to scientists and engineers. It covers geostatistical data, lattice data and point patterns. **Statistics for Spatial Data** Noel Cressie, 2015-07-27 The Wiley Classics Library consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes, Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians and scientists. Spatial statistics, analyzing spatial data through statistical models, has proven exceptionally versatile, encompassing problems ranging from the microscopic to the astronomic. However, for the scientist and engineer faced only with scattered and uneven treatments of the subject in the scientific literature, learning how to make practical use of spatial statistics in day-to-day analytical work is very difficult. Designed exclusively for scientists eager to tap into the enormous potential of this analytical tool and upgrade their range of technical skills, *Statistics for Spatial Data* is a comprehensive single source guide to both the theory and applied aspects of spatial statistical methods. The hard cover edition was hailed by *Mathematical Reviews* as an excellent book which will become a basic reference. This paper back edition of the 1993 edition is designed to meet the many technological challenges facing the scientist and engineer. Concentrating on the three areas of geostatistical data, lattice data and point patterns, the book sheds light on the link between data and model, revealing how design, inference and diagnostics are an outgrowth of that link. It then explores new methods to reveal just how spatial statistical models can be used to solve important problems in a host of areas in science and engineering. Discussion includes: Exploratory spatial data analysis; Spectral theory for stationary processes; Spatial scale; Simulation methods for spatial processes; Spatial bootstrapping; Statistical image analysis and remote sensing; Computational aspects of model fitting; Application of models to disease mapping. Designed to accommodate the practical needs of the professional, it features a unified and common notation for its subject as well as many detailed examples woven into the text; numerous illustrations, including graphs that illuminate the theory discussed; and over 1,000 references. Fully balancing theory with applications, *Statistics for Spatial Data* Revised Edition is an exceptionally clear guide on making optimal use of one of the ascendant analytical tools of the decade, one that has begun to capture the imagination of professionals in biology, earth science, civil, electrical and agricultural engineering, geography, epidemiology and ecology. **Statistical Methods for Spatial Data Analysis** Oliver Schabenberger, Carol A. Gotway, 2004-12-20 Understanding spatial statistics requires tools from applied and mathematical statistics, linear model theory, regression, time series, and stochastic processes. It also requires a mindset that focuses on the unique characteristics of spatial data and the development of specialized analytical tools designed explicitly for spatial data analysis. *Statistical Methods for Spatial Data Analysis* answers the demand for a text that incorporates all of these factors by presenting a balanced exposition that explores both the theoretical foundations of the field of spatial statistics, as well as practical methods

for the analysis of spatial data. This book is a comprehensive and illustrative treatment of basic statistical theory and methods for spatial data analysis employing a model based and frequentist approach that emphasizes the spatial domain. It introduces essential tools and approaches including measures of autocorrelation and their role in data analysis the background and theoretical framework supporting random fields the analysis of mapped spatial point patterns estimation and modeling of the covariance function and semivariogram a comprehensive treatment of spatial analysis in the spectral domain and spatial prediction and kriging. The volume also delivers a thorough analysis of spatial regression providing a detailed development of linear models with uncorrelated errors linear models with spatially correlated errors and generalized linear mixed models for spatial data. It succinctly discusses Bayesian hierarchical models and concludes with reviews on simulating random fields non stationary covariance and spatio temporal processes. Additional material on the CRC Press website supplements the content of this book. The site provides data sets used as examples in the text software code that can be used to implement many of the principal methods described and illustrated and updates to the text itself. **Spatial Statistics** Brian D. Ripley, 2005-02-25. The Wiley Interscience Paperback Series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation. With these new unabridged softcover volumes Wiley hopes to extend the lives of these works by making them available to future generations of statisticians, mathematicians and scientists. Books such as this that bring together clarify and summarize recent research can lead to a great increase of interest in the area a major achievement in describing many aspects of spatial data and discussing with examples different methods of analysis. Royal Statistical Society Dr Ripley's book is an excellent survey of the spatial statistical methodology. It is very well illustrated with examples that give a clear view of the wide scope of the subject the way in which techniques often have to be tailored to particular applications and the different sorts of spatial data that arise. The Bulletin of the London Mathematics Society Spatial Statistics provides a comprehensive guide to the analysis of spatial data. Each chapter covers a particular data format and the associated class of problems introducing theory giving computational suggestions and providing examples. Methods are illustrated by computer drawn figures. The book serves as an introduction to this rapidly growing research area for mathematicians and statisticians and as a reference to new computer methods for researchers in ecology, geology, archaeology and the earth sciences. **Hierarchical Modeling and Analysis for Spatial Data, Second Edition** Sudipto Banerjee, Bradley P. Carlin, Alan E. Gelfand, 2014-09-12. Keep Up to Date with the Evolving Landscape of Space and Space Time Data Analysis and Modeling. Since the publication of the first edition the statistical landscape has substantially changed for analyzing space and space time data. More than twice the size of its predecessor Hierarchical Modeling and Analysis for Spatial Data Second Edition reflects the major growth in spatial statistics as both a research area and an area of application. New to the Second Edition New chapter on spatial point patterns developed primarily from a modeling perspective. New chapter on big data that shows how the predictive process handles reasonably large datasets. New chapter on spatial and

spatiotemporal gradient modeling that incorporates recent developments in spatial boundary analysis and wombling New chapter on the theoretical aspects of geostatistical point referenced modeling Greatly expanded chapters on methods for multivariate and spatiotemporal modeling New special topics sections on data fusion assimilation and spatial analysis for data on extremes Double the number of exercises Many more color figures integrated throughout the text Updated computational aspects including the latest version of WinBUGS the new flexible spBayes software and assorted R packages The Only Comprehensive Treatment of the Theory Methods and Software This second edition continues to provide a complete treatment of the theory methods and application of hierarchical modeling for spatial and spatiotemporal data It tackles current challenges in handling this type of data with increased emphasis on observational data big data and the upsurge of associated software tools The authors also explore important application domains including environmental science forestry public health and real estate

Advanced Spatial Statistics Daniel A. Griffith, 2012-12-06 In recent years there has been a growing interest in and concern for the development of a sound spatial statistical body of theory This work has been undertaken by geographers statisticians regional scientists econometricians and others e g sociologists It has led to the publication of a number of books including Cliff and Ord s Spatial Processes 1981 Bartlett s The Statistical Analysis of Spatial Pattern 1975 Ripley s Spatial Statistics 1981 Paelinck and Klaassen s Spatial Econometrics 1979 Ahuja and Schachter s Pattern Models 1983 and Upton and Fingleton s Spatial Data Analysis by Example 1985 The first of these books presents a useful introduction to the topic of spatial autocorrelation focusing on autocorrelation indices and their sampling distributions The second of these books is quite brief but nevertheless furnishes an eloquent introduction to the relationship between spatial autoregressive and two dimensional spectral models Ripley s book virtually ignores autoregressive and trend surface modelling and focuses almost solely on point pattern analysis Paelinck and Klaassen s book closely follows an econometric textbook format and as a result overlooks much of the important material necessary for successful spatial data analysis It almost exclusively addresses distance and gravity models with some treatment of autoregressive modelling Pattern Models supplements Cliff and Ord s book which in combination provide a good introduction to spatial data analysis Its basic limitation is a preoccupation with the geometry of planar patterns and hence is very narrow in scope

Handbook of Spatial Statistics Alan E. Gelfand, Peter Diggle, Peter Guttorp, Montserrat Fuentes, 2010-03-19 Assembling a collection of very prominent researchers in the field the Handbook of Spatial Statistics presents a comprehensive treatment of both classical and state of the art aspects of this maturing area It takes a unified integrated approach to the material providing cross references among chapters The handbook begins with a historical intro

Non-standard Spatial Statistics and Spatial Econometrics Daniel A. Griffith, Jean H. Paul Paelinck, 2011-01-11 Despite spatial statistics and spatial econometrics both being recent sprouts of the general tree spatial analysis with measurement some may remember the debate after WWII about theory without measurement versus measurement without theory several general themes have emerged in the pertaining

literature But exploring selected other fields of possible interest is tantalizing and this is what the authors intend to report here hoping that they will suscitate interest in the methodologies exposed and possible further applications of these methodologies The authors hope that reactions about their publication will ensue and they would be grateful to reader s motivated by some of the research efforts exposed hereafter letting them know about these experiences *Hierarchical Modeling and Analysis for Spatial Data* Sudipto Banerjee,Bradley P. Carlin,Alan E. Gelfand,2003-12-17 Among the many uses of hierarchical modeling their application to the statistical analysis of spatial and spatio temporal data from areas such as epidemiology And environmental science has proven particularly fruitful Yet to date the few books that address the subject have been either too narrowly focused on specific aspects of spatial analysis

Spatial Data Analysis in the Social and Environmental Sciences Robert P. Haining,Robert Haining,1993-08-26 A spatial data set is a data set in which each observation is referenced to a site or area Within both the social and environmental sciences much of the data collected is within a spatial context and requires statistical analysis for interpretation The purpose of this book therefore is to describe to students and research workers in the social and environmental sciences the current methods available for the analyses of spatial data Methods described include data description map interpolation exploratory and explanatory analyses The book also examines how spatial referencing raises a distinctive set of issues for the data analyst and recognizes the need to test underlying statistical assumptions Further methods for detecting problems assessing their seriousness and taking appropriate action are discussed

Spatial Data Analysis With R Danlin Yu,2025-02-27 This is an introduction for social

science students to the growing field of spatial data analysis using the R platform. The text assumes no prior knowledge of either beyond the contents of an introductory statistics course. It uses the open source software R and relevant spatial data analysis packages to provide practical guidance of how to conduct spatial data analysis with readers own data sets. The book first briefly introduces students to R, covers some basic concepts in statistical data analysis and then focuses on discussing the central ideas of spatial data analysis. All the discussions are supported with R scripts so that students can work on their own and produce results that the book helps interpret. Each chapter ends with review questions to test understanding. The book is suited for upper level undergraduate social science students and graduate students and other social scientists who are interested in analyzing their spatial data with R. A companion website for the book at <https://edge.sagepub.com/yu> includes R code and data for students to replicate the examples in the book. The password protected instructor side of the site includes exercises and answers which can be set for homework.

Statistics for Spatio-Temporal Data Noel Cressie, Christopher K. Wikle, 2015-11-02. Winner of the 2013 DeGroot Prize. A state of the art presentation of spatio temporal processes bridging classic ideas with modern hierarchical statistical modeling concepts and the latest computational methods. Noel Cressie and Christopher K Wikle are also winners of the 2011 PROSE Award in the Mathematics category for the book *Statistics for Spatio Temporal Data* 2011 published by John Wiley and Sons. The PROSE awards for Professional and Scholarly Excellence are given by the Association of American Publishers the national trade association of the US book publishing industry. *Statistics for Spatio Temporal Data* has now been reprinted with small corrections to the text and the bibliography. The overall content and pagination of the new printing remains the same. The difference comes in the form of corrections to typographical errors, editing of incomplete and missing references and some updated spatio temporal interpretations. From understanding environmental processes and climate trends to developing new technologies for mapping public health data and the spread of invasive species there is a high demand for statistical analyses of data that take spatial temporal and spatio temporal information into account. *Statistics for Spatio Temporal Data* presents a systematic approach to key quantitative techniques that incorporate the latest advances in statistical computing as well as hierarchical particularly Bayesian statistical modeling with an emphasis on dynamical spatio temporal models. Cressie and Wikle supply a unique presentation that incorporates ideas from the areas of time series and spatial statistics as well as stochastic processes. Beginning with separate treatments of temporal data and spatial data the book combines these concepts to discuss spatio temporal statistical methods for understanding complex processes. Topics of coverage include Exploratory methods for spatio temporal data including visualization, spectral analysis, empirical orthogonal function analysis and LISAs. Spatio temporal covariance functions, spatio temporal kriging and time series of spatial processes. Development of hierarchical dynamical spatio temporal models DSTMs with discussion of linear and nonlinear DSTMs and computational algorithms for their implementation. Quantifying and exploring spatio temporal variability in scientific applications including case studies based on real world

environmental data. Throughout the book interesting applications demonstrate the relevance of the presented concepts. Vivid full color graphics emphasize the visual nature of the topic and a related FTP site contains supplementary material. *Statistics for Spatio Temporal Data* is an excellent book for a graduate level course on spatio temporal statistics. It is also a valuable reference for researchers and practitioners in the fields of applied mathematics, engineering and the environmental and health sciences.

Recent Developments in Spatial Analysis Manfred M Fischer, Arthur Getis, 2012-12-22

In recent years spatial analysis has become an increasingly active field as evidenced by the establishment of educational and research programs at many universities. Its popularity is due mainly to new technologies and the development of spatial data infrastructures. This book illustrates some recent developments in spatial analysis, behavioural modelling and computational intelligence. World renown spatial analysts explain and demonstrate their new and insightful models and methods. The applications are in areas of societal interest such as the spread of infectious diseases, migration behaviour and retail and agricultural location strategies. In addition there is emphasis on the uses of new technologies for the analysis of spatial data through the application of neural network concepts.

Perspectives on Spatial Data Analysis Luc Anselin, Sergio J. Rey, 2009-12-24

Spatial data analysis has seen explosive growth in recent years. Both in mainstream statistics and econometrics as well as in many applied fields the attention to space, location and interaction has become an important feature of scholarly work. The methods developed to deal with problems of spatial pattern recognition, spatial autocorrelation and spatial heterogeneity have seen greatly increased adoption in part due to the availability of user friendly desktop software. Through his theoretical and applied work Arthur Getis has been a major contributing figure in this development. In this volume we take both a retrospective and a prospective view of the field. We use the occasion of the retirement and move to emeritus status of Arthur Getis to highlight the contributions of his work. In addition we aim to place it into perspective in light of the current state of the art and future directions in spatial data analysis. To this end we elected to combine reprints of selected classic contributions by Getis with chapters written by key spatial scientists. These scholars were specifically invited to react to the earlier work by Getis with an eye toward assessing its impact, tracing out the evolution of related research and to reflect on the future broadening of spatial analysis. The organization of the book follows four main themes in Getis' contributions: Spatial analysis, Pattern analysis, Local statistics, Applications. For each of these themes the chapters provide a historical perspective on early methodological developments and theoretical insights, assessments of these contributions in light of the current state of the art as well as descriptions of new techniques and applications.
