Harper,C.A. Hooker,2012-12-06 In May of 1973 we organized an international research colloquium on foundations of probability statistics and statistical theories of science at the University of Western Ontario During the past four decades there have been striking formal advances in our understanding of logic semantics and algebraic structure in probabilistic and statistical theories These advances which include the development of the relations between semantics and metamathematics between logics and algebras and the algebraic geometrical foundations of statistical theories especially in the sciences have led to striking new insights into the formal and conceptual structure of probability and statistical theory and their scientific applications in the form of scientific theory The foundations of statistics are in a state of profound conflict Fisher's objections to some aspects of Neyman Pearson statistics have long been well known More recently the emergence of Bayesian statistics as a radical alternative to standard views has made the conflict especially acute In recent years the response of many practising statisticians to the conflict has been an eclectic approach to statistical inference Many good statisticians have developed a kind of wisdom which enables them to know which problems are most appropriately handled by each of the methods available The search for principles which would explain why each of the methods works where it does and fails where it does offers a fruitful approach to the controversy over foundations    **The Foundations of Statistical Inference**

Foundation,University of Waterloo. Department of Statistics,1971 **Foundations of Statistical Inference** University of Waterloo,1971 *The Logical Foundations of Statistical Inference* Henry E. Kyburg Jr.,2012-12-06 Everyone knows it is easy to lie with statistics It is important then to be able to tell a statistical lie from a valid statistical inference It is a relatively widely accepted commonplace that our scientific knowledge is not certain and incorrigible but merely probable subject to refinement modification and even overthrow The rankest beginner at a gambling table understands that his decisions must be based on mathematical expectations that is on utilities weighted by probabilities It is widely held that the same principles apply almost all the time in the game of life If we turn to philosophers or to mathematical statisticians or to probability theorists for criteria of validity in statistical inference for the general principles that distinguish well grounded from ill grounded generalizations and laws or for the interpretation of that probability we must like the gambler take as our guide in life we find disagreement confusion and frustration We might be prepared to find disagreements on a philosophical and theoretical level although we do not find them in the case of deductive logic but we do not expect and we may be surprised to find that these theoretical disagreements lead to differences in the conclusions that are regarded as acceptable in the practice of science and public affairs and in the conduct of business **Foundations of Statistical Inference** Leonard J. *On the Foundations of Statistical Inference, I* Allan Birnbaum,2017-10-21 Excerpt from On the Foundations of Statistical Inference I Binary Experiments This result is used with standard frequency interpretations of probabilities in an analysis of the foundations of statistical inference This analysis establishes the likelihood function as the appropriate basis from which statistical inferences can be made directly for the familiar general purposes of informative inference For the numerical values of the likelihood function this analysis provides direct interpretations in terms of probabilities of errors These probabilities admit frequency interpretations of the usual kind but they are not in general defined with reference to the specific experiment from which an outcome is obtained they express intrinsic objective properties of the likelihood function itself which this analysis shows to be appropriately relevant and directly useful for purposes of informative inference The relations of this analysis of problems of informative inference to problems of testing statistical hypotheses decision making conclusions and Bayesian treatments of inference problems are discussed briefly About the Publisher Forgotten
