The Four Category Ontology A Metaphysical Foundation For Natural Science

E. J. Lowe

The Four Category Ontology A Metaphysical Foundation For Natural Science:

The Four-Category Ontology E. J. Lowe, 2005-12-01 E J Lowe sets out and defends his theory of what there is His four category ontology is a metaphysical system that recognizes two fundamental categorial distinctions which cut across each other to generate four fundamental ontological categories The distinctions are between the particular and the universal and between the substantial and the non substantial The four categories thus generated are substantial particulars non substantial particulars substantial universals and non substantial universals Non substantial universals include properties and relations conceived as universals Non substantial particulars include property instances and relation instances otherwise known as non relational and relational tropes or modes Substantial particulars include propertied individuals the paradigm examples of which are persisting concrete objects Substantial universals are otherwise known as substantial kinds and include as paradigm examples natural kinds of persisting objects This ontology has a lengthy pedigree many commentators attributing it to Aristotle on the basis of certain passages in his apparently early work the Categories At various times during the history of Western philosophy it has been revived or rediscovered but it has never found universal favour perhaps on account of its apparent lack of parsimony as well as its commitment to universals In pursuit of ontological economy metaphysicians have generally preferred to recognize fewer than four fundamental ontological categories However Occam's razor stipulates only that we should not multiply entities beyond necessity Lowe argues that the four category ontology has an explanatory power unrivalled by more parsimonious systems and that this counts decisively in its favour He shows that it provides a powerful explanatory framework for a unified account of causation dispositions natural laws natural necessity and many other related matters such as the semantics of counterfactual conditionals and the character of the truthmaking relation As such it constitutes a thoroughgoing metaphysical foundation for natural science

Contents List [E.J. Lowe and Ontology](#)

Miroslaw Szatkowski, 2022-03-17 This volume collects fifteen original essays on E J Lowe's work on metaphysics and ontology The essays connect Lowe's insights with contemporary issues in metaphysics E J Lowe 1950-2014 was one of the most influential analytical philosophers of the twentieth and early twenty first century Drawing inspiration from Aristotle's thought E J Lowe treated metaphysics as an autonomous discipline concerned with the fundamental structure of reality The chapters in this volume reflect on his path breaking work They deal with a wide range of metaphysical issues including four category ontology the causal and non causal aspects of agency categorial fundamentality and non fundamentality the existence of relations property dualism powers and abilities personal identity predication and topological ontology Taken together the chapters reflect the liveliness of contemporary debates in metaphysics and the enduring impact of Lowe's thought on them E J Lowe and Ontology will be of interest to researchers and advanced students working in metaphysics and philosophy of mind

Metaphysics and Science Stephen Mumford, Matthew Tugby, 2013-06-27 Metaphysics and Science brings together important new work within an emerging philosophical discipline the metaphysics of science In the opening

chapter a definition of the metaphysics of science is offered one which explains why the topics of laws causation natural kinds and emergence are at the discipline's heart. The book is then divided into four sections which group together papers from leading academics on each of those four topics. Among the questions discussed are How are laws and measurement methods related? Can a satisfactory reductive account of laws be given? How can Lorentz transformation laws be explained? How are dispositions triggered? What role should dispositional properties play in our understanding of causation? Are natural kinds and natural properties distinct? How is the Kripke Putnam semantics for natural kind terms related to the natural kind essentialist thesis? What would have to be the case for natural kind terms to have determinate reference? What bearing if any does nonlinearity in science have on the issue of metaphysical emergence? This collection will be of interest to philosophers, scientists and post graduates working on problems at the intersection of metaphysics and science.

An Introduction to Metametaphysics Tuomas E. Tahko, 2015-11-12

How do we come to know metaphysical truths? How does metaphysical inquiry work? Are metaphysical debates substantial? These are the questions which characterize metametaphysics. This book, the first systematic student introduction dedicated to metametaphysics, discusses the nature of metaphysics, its methodology,

epistemology, ontology and our access to metaphysical knowledge. It provides students with a firm grounding in the basics of metametaphysics, covering a broad range of topics in metaontology such as existence, quantification, ontological commitment and ontological realism. Contemporary views are discussed along with those of Quine, Carnap and Meinong.

Going beyond the metaontological debate, a thorough treatment is given to novel topics in metametaphysics, including grounding, ontological dependence, fundamentality, modal epistemology, intuitions, thought experiments and the relationship between metaphysics and science. The book will be an essential resource for those studying advanced metaphysics, philosophical methodology,

metametaphysics, epistemology and the philosophy of science.

Neo-Aristotelian Perspectives in Metaphysics Daniel D. Novotný, Lukáš Novák, 2014-04-16

This volume re-examines some of the major themes at the intersection of traditional and contemporary metaphysics. The book uses as a point of departure Francisco Suárez's *Metaphysical Disputations*, published in 1597.

Minimalist metaphysics, in empiricist pragmatist clothing, have today become mainstream in analytic philosophy. Independently of this development, the progress of scholarship in ancient and medieval philosophy makes clear that

traditional forms of metaphysics have affinities with some of the streams in contemporary analytic metaphysics. The book brings together leading contemporary metaphysicians to investigate the viability of a neo-Aristotelian metaphysics.

The Exoteric Square of Opposition Jean-Yves Beziau, Ioannis Vandoulakis, 2022-08-23

The theory of the square of opposition has been studied for over 2 000 years and has seen a resurgence in new theories and research since the second half of the twentieth century. This volume collects papers presented at the Sixth World Congress on the Square of Opposition, held in Crete in 2018, developing an interdisciplinary exploration of the theory. Chapter authors explore subjects such as Aristotle's ontological square, logical oppositions in Avicenna's hypothetical logic and the power of the square of opposition to solve

theological problems regarding predestination and theodicy Other topics covered include Hegel's opposition to diagrams De Morgan's unpublished octagon of opposition turnstile figures of opposition institutional model theoretic treatment of oppositions Lacan's four formulas of sexuation the theory of oppositional poly simplexes The Exoteric Square of Opposition will appeal to pure logicians historians of logic semioticians philosophers theologians mathematicians and psychoanalysts
