Setek, Michael A. Gallo, 1999 For courses in Liberal Arts Mathematics This text succeeds at what other texts only attempt it demystifies mathematics It presents the fundamentals of a variety of mathematical disciplines in a straightforward easy to understand manner The emphasis is on developing skills and confidence in mathematics for students with a wide range of abilities The only prerequisite is a working knowledge of arithmetic      *The Teaching of Elementary Algebra* Paul Ligda, 1925      *The Teaching of General Mathematics in the Secondary Schools of the United States* Clarence McCormick, 1929      *Math B75* Charles McKeague, 2019      **Books and Pamphlets, Including Serials and Contributions to Periodicals** Library of Congress. Copyright Office, 1977      *The Fundamentals of Statistics* Louis Leon Thurstone, 1925      **Discover** , 1988      *Basic Mathematics* Marion Wiles Keller, James Howard Zant, 1956      *Curriculum as Contestation* Suellen Shay, Tai L. Peseta, 2019-12-18 In 2015 a social movement swept across the South African higher education sector fuelled by the anger of the born free generation the students born into post apartheid South Africa The movement found solidarity in other parts of the globe where the past decade has witnessed the rise of student protests in the UK the US Chile Turkey and Hong Kong to name a few While the demands are specific to national contexts the underlying obstacles of economic cultural and political access into higher education are consistent These protests have put a spotlight on the global academy that like the society of which it is a part is increasingly characterized by inequality At its core these movements call for a more socially just higher education system This call is profoundly dissonant to the dominant neoliberal discourses currently shaping higher education Against the backdrop of these discourses there has been an unprecedented pressure on higher education curricula This edited collection is dedicated to exploring what a socially just curriculum reform agenda might involve The authors share a commitment to socially just curricula and a concern about the ways in which curricula are deeply implicated in the processes of producing and reproducing inequality Each chapter opens up a different vista on the contested curriculum space drawing on a range of theoretical tools Archer Bernstein Giroux and Maton to name a few to illuminate the contestation Perhaps even more importantly they also draw on a range of voices from both inside and outside the academy This book was originally published as a special issue of *Teaching in Higher Education*      *Fundamentals of Algebra and Trigonometry* Earl William Swokowski, 1993 A one semester precalculus course taught at two and four year schools Takes the unit circle approach to

*Fundamentals of Algebraic Specification 2* Hartmut Ehrig, Bernd Mahr, 1989-12-28 Since the early seventies concepts of specification have become central in the whole area of computer science Especially algebraic specification techniques for abstract data types and software systems have gained considerable importance in recent years They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the subject or are used with advantage on a conceptual level Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field We understand fundamentals in this context as 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms
