*Tomorrow's People* Paul Morland, 2022-03-17 Morland predicts the future of humanity in 10 illuminating statistics could the Japanese and Italians now go the way of the dodo and looks back to how ebbs and flows of population have shaped history such as the Soviet Union's plummeting birth rate in the 1960s which hastened the end of the Cold War The Daily Telegraph The Best Books for Summer 2022 The great forces of population change the balance of births deaths and migrations have made the world what it is today They have determined which countries are superpowers and which languish in relative obscurity which economies top the international league tables and which are at best also rans The same forces that have shaped our past and present are shaping our future Illustrating this through ten illuminating indicators from the fertility rate in Singapore one to the median age in Catalonia forty three Paul Morland shows how demography is both a powerful and an under appreciated lens through which to view the global transformations that are currently underway Tomorrow's People ranges from the countries of West Africa where the tendency towards large families is combining with falling infant mortality to create the greatest population explosion ever witnessed to the countries of East Asia and Southern Europe where generations of low birth rate and rising life expectancy are creating the oldest populations in history Morland explores the geographical movements of peoples that are already under way portents for still larger migrations ahead which are radically changing the cultural ethnic and religious composition of many societies across the globe and in their turn creating political reaction that can be observed from Brexit to the rise of Donald Trump Finally he looks at the two underlying motors of change remarkable rises in levels of education and burgeoning food production which have made all these epochal developments possible Tomorrow's People provides a fascinating illuminating and thought provoking tour of an emerging new world Nobody who wants to understand that world should be without it

*On the Future* Martin Rees, 2021-10-05 A provocative and inspiring look at the future of humanity and science from world renowned scientist and bestselling author Martin Rees Humanity has reached a critical moment Our world is unsettled and rapidly changing and we face existential risks over the next century Various outcomes good and bad are possible Yet our approach to the future is characterized by short term thinking polarizing debates alarmist rhetoric and pessimism In this short exhilarating book renowned scientist and bestselling author Martin Rees argues that humanity's prospects depend on our taking a very different approach to planning for tomorrow The future of humanity is bound to the future of science and hinges on how successfully we harness technological advances to address our challenges If we are to use science to solve our problems while avoiding its dystopian risks we must think rationally globally collectively and optimistically about the long term Advances in biotechnology cyber technology robotics and artificial intelligence if pursued and applied wisely could empower us to boost the developing and developed world and overcome the threats humanity faces on Earth from climate change to nuclear war At the same time further advances in space science will allow humans to

explore the solar system and beyond with robots and AI But there is no Plan B for Earth no viable alternative within reach if we do not care for our home planet Rich with fascinating insights into cutting edge science and technology this accessible book will captivate anyone who wants to understand the critical issues that will define the future of humanity on Earth and beyond Evolving Ourselves Juan Enriquez, Steve Gullans, 2015-03-10 We are the primary drivers of change We will directly and indirectly determine what lives what dies where and when We are in a different phase of evolution the future of life is now in our hands Why are rates of conditions like autism asthma obesity and allergies exploding at an unprecedented pace Why are humans living longer getting smarter and having far fewer kids How might your lifestyle affect your unborn children and grandchildren How will gene editing technologies like CRISPR steer the course of human evolution If Darwin were alive today how would he explain this new world Could our progeny eventually become a different species or several In Evolving Ourselves futurist Juan Enriquez and scientist Steve Gullans conduct a sweeping tour of how humans are changing the course of evolution sometimes intentionally sometimes not For example Globally rates of obesity in humans nearly doubled between 1980 and 2014 What's more there's evidence that other species from pasture fed horses to lab animals to house cats are also getting fatter As reported by U S government agencies the rate of autism rose by 131 percent from 2001 to 2010 an increase that cannot be attributed simply to increases in diagnosis rates Three hundred years ago almost no one with a serious nut allergy lived long enough to reproduce Today despite an environment in which food allergies have increased by 50 percent in just over a decade 17 million Americans who suffer from food allergies survive thrive and pass their genes and behaviors on to the next generation In the pre Twinkie era early humans had quite healthy mouths As we began cooking bathing and using antibiotics the bacteria in our bodies changed dramatically and became far less diverse Today the consequences are evident not only in our teeth but throughout our bodies and minds Though these harbingers of change are deeply unsettling the authors argue that we are also in an epoch of tremendous opportunity New advances in biotechnology help us mitigate the cruel forces of natural selection from saving prematurely born babies to gene therapies for sickle cell anemia and other conditions As technology like CRISPR enables us to take control of our genes we will be able to alter our own species and many others a good thing given that our eventual survival will require space travel and colonization enabled by a fundamental redesign of our bodies Future humans could become great caretakers of the planet as well as a more diverse more resilient gentler and more intelligent species but only if we make the right choices now Intelligent provocative and optimistic Evolving Ourselves is the ultimate guide to the next phase of life on Earth

**Humanity in the Mystery of God** Jennifer Cooper, 2009-06-30 Schillebeeckx's theology is a reflection on the nature of God who is both creator and redeemer his theology is a treatise on the God who is God for humanity This means of course that his theology is always both a reflection on the nature of God and on the meaning of humanity and hence there is a theological anthropology at the centre of his whole theological enterprise The definition of humanity is given in the

relationship between the mystery of God the God who is both transcendent and immanent and the mystery of humanity For Schillebeeckx the meaning of humanity is revealed and established in the mystery of God as a vocation to intimacy with God This intimacy is described both as a dependence upon God and as a situated freedom and hence the description of humanity which emerges from Schillebeeckx s treatise on God holds together humanity s metaphysical and moral significance At the heart of this theocentric anthropology is its christological structure Schillebeeckx develops a sacramental christology in light of his interpretation of Christ s incarnation The relation of incarnation to the death resurrection and glorification of Christ establishes a sacramental theological anthropology The meaning of humanity is given in its creative salvific sanctifying participative and personal relation to the God who is God both of creation and of covenant This book develops an interpretation of Schillebeeckx s theological anthropology by analysing his theology of revelation and grace and by examining the christological structure of his theology This christology centres on an interpretation of the incarnation in which the fully personal nature of Christ s humanity is key This christology establishes the sacramental nature of humanity and hence Schillebeeckx s description of the meaning of human nature is also a theological description of the meaning of human action

**The Cradle of Humanity** Mark Maslin, 2016-12-06 Humans are rather weak when compared with many other animals We are not particularly fast and have no natural weapons Yet Homo sapiens currently number nearly 7.5 billion and are set to rise to nearly 10 billion by the middle of this century We have influenced almost every part of the Earth system and as a consequence are changing the global environmental and evolutionary trajectory of the Earth So how did we become the world's apex predator and take over the planet Fundamental to our success is our intelligence not only individually but more importantly collectively But why did evolution favour the brainy ape Given the calorific cost of running our large brains not to mention the difficulties posed for childbirth this bizarre adaptation must have given our ancestors a considerable advantage In this book Mark Maslin brings together the latest insights from hominin fossils and combines them with evidence of the changing landscape of the East African Rift Valley to show how all these factors led to selection pressures that favoured our ultrasocial brains Astronomy geology climate and landscape all had a part to play in making East Africa the cradle of humanity and allowing us to dominate the planet
