warming rural populations would face mounting pressures from sea level rise increased tropical cyclone intensity storm surges saltwater intrusions and loss of marine ecosystem services In South Asia the potential sudden onset of disturbances to the monsoon system and rising peak temperatures would put water and food resources at severe risk Well before 2 C warming occurs substantial reductions in the frequency of low snow years is projected to cause substantial reductions in dry season flow threatening agriculture Many of the worst climate impacts could still be avoided by holding warming below 2 C but the window for action is closing rapidly Urgent action is also needed to build resilience to a rapidly warming world that will pose significant risks to agriculture water resources coastal infrastructure and human health
