philosophy when he inaugurated a debate about the principle of methodological individualism a debate which continues to this day and which has inspired a literature as great as any in contemporary philosophy Few collections of material in the general area of philosophy of social science would be considered complete unless they contained at least one of Watkins's many contributions to the discussion of this issue In 1957 Watkins published the first of a series of three papers 1957b 1958d and 1960a in which he tried to codify and rehabilitate metaphysics within the Popperian philosophy placing it somewhere between the analytic and the empirical He thus signalled the emergence of an important implication of Popper's thought that had not to that point been stressed by Sir Karl himself and which marked off his followers from the antimetaphysical ideas of the regnant logical positivists In 1965 years of work in political philosophy and in the history of philosophy in the seventeenth century were brought to fruition in Watkins's widely cited and admired Hobbes's System of Ideas 1965a second edition 1973d This book is an important contribution not just to our understanding of Hobbes's political thinking but perhaps more importantly to our understanding of the way in which a system of ideas is constituted and applied Watkins built on earlier work in developing an account of Hobbes's ideas in which was revealed and clarified the unity of Hobbes's metaphysical epistemological and political ideas *Advances in Applied Human Modeling and Simulation* Vincent G. Duffy, 2012-07-09 Derived from the conference submissions for the 2012 AHFE conference this volume focuses on types of human modeled technology Topics include digital human model types 3D scanning human patterns in terms of physiological and psychological interactions including human algorithms that aim to model human forms interactions and dynamics It also covers validation of digital human models and the exploration of future of human models This book is for Human factors and ergonomics engineers cognitive engineers human computer interaction engineers human performance modeling engineers and students in related fields **The New Learning Architect** Clive Shepherd, 2011 We are all learning machines constantly adapting to the ever changing threats and opportunities with which we are confronted We learn through experience whether consciously or unconsciously we learn by seeking out the knowledge and skills we need to carry out our day to day tasks we learn by sharing experiences and best practice with our colleagues and by taking advantage of opportunities for development both formal and informal The new learning architect designs environments that enable specific target populations to take maximum advantage of all these opportunities for learning To do this they need to understand the unique characteristics of their clients and the business challenges they are facing they need to find just the right balance between top down and bottom up learning initiatives between the formal and informal The new learning architect is at the vanguard of the next generation of learning and development professionals taking advantage of the latest tools technologies and thinking to help organisations meet the acute financial time and environmental pressures of the 21st
