## **The Gaia Syndrome:**

The Gaia Syndrome V. Merle Ricardo, 2016-05-12 Before the pantheon of gods led by Zeus on Mount Olympus there was the yawning void of Chaos From this chaos there emerged Gaia the Earth goddess Gaia watches over Earth and with the passing of time becomes concerned She fears that human beings have become greedy and destructive She engages her chief of staff Solon to harvest teenagers from various places on Earth They are to be subjected to ever increasing degrees of endurance The survivors are then to be released in pods to save the Earth from a return to Chaos but will any of them survive this Spartan existence

**The Gaia Syndrome** Chris Wills, 2002-01-01 When deadly epidemics rise up all over Earth and threaten to make humans extinct scientists develop a theory they call the Gaia Syndrome Mother Nature has had enough of mankind and is fighting back To save humanity another planet must be found to support life

King, 2021-12-16 *Computers and Games for Mental Health and Well-Being* Yasser Khazaal, Jérôme Favrod, Anna Sort, François Borgeat, Stéphane Bouchard, 2018-07-12 Recent years have seen important developments in the computer and game industry including the emergence of the concept of serious games It is hypothesized that tools such as games virtual reality or applications for smartphones may foster learning enhance motivation promote behavioral change support

psychotherapy favor empowerment and improve some cognitive functions Computers and games may create supports for

training or help people with cognitive emotional or behavioral change Games take various formats from board games to

informatics to games with interactive rules of play Similarly computer tools may vary widely in format from self help or

assisted computerized training to virtual reality or applications for smartphones Some tools that may be helpful for mental

health were specifically designed for that goal whereas others were not Gamification of computer related products and

games with a numeric format tend to reduce the gap between games and computers tools and increase the conceptual

synergy in such fields Games and computer design share an opportunity for creativity and innovation to help create

specifically design and assess preventive or therapeutic tools Computers and games share a design conception that allows

innovative approaches to overcome barriers of the real world by creating their own rules Yet despite the potential interest in

such tools to improve treatment of mental disorders and to help prevent them the field remains understudied and information

is under disseminated in clinical practice Some studies have shown however that there is potential interest and acceptability

of tools that support various vehicles rationales objectives and formats These tools include traditional games e g chess games

popular electronic games board games computer based interventions specifically designed for psychotherapy or cognitive

training virtual reality apps for smartphones and so forth Computers and games may offer a true opportunity to develop

assess and disseminate new prevention and treatment tools for mental health and well being Currently there is a strong need

for state of the art information to answer questions such as the following Why develop such tools for mental health and well

being What are the potential additions to traditional treatments What are the best strategies or formats to improve the

possible impact of these tools Are such tools useful as a first treatment step What is the potential of a hybrid model of care that combines traditional approaches with games and or computers as tools What games and applications have already been designed and studied What is the evidence from previous studies How can such tools be successfully designed for mental health and well being What is rewarding or attractive for patients in using such treatments What are the worldwide developments in the field Are some protocols under development What are the barriers and challenges related to such developments How can these tools be assessed and how can the way that they work and for whom be measured Are the potential benefits of such products specific or can these additions be attributed to nonspecific factors What are the users views on such tools What are the possible links between such tools and social networks Is there a gap between evidence based results and market development Are there any quality challenges What future developments and studies are needed in the field

**Science Fact and Science Fiction** Brian Stableford,2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings Science Fact and Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed

**Landscapes and Societies** I. Peter Martini,Ward Chesworth,2010-11-09 This book contains case histories intended to show how societies and landscapes interact The range of interest stretches from the small groups of the earliest Neolithic through Bronze and Iron Age civilizations to modern nation states The coexistence is of its very nature reciprocal resulting in changes in both society and landscape In some instances the adaptations may be judged successful in terms of human needs but failure is common and even the successful cases are ephemeral when judged in the light of history Comparisons and contrasts between the various cases can be made at various scales from global

through inter regional to regional and smaller scales At the global scale all societies deal with major problems of climate change sea level rise and with ubiquitous problems such as soil erosion and landscape degradation Inter regional differences bring out significant detail with one region suffering from drought when another suffers from widespread flooding For example desertification in North Africa and the Near East contrasts with the temperate countries of southern Europe where the landscape effects of deforestation are more obvious And China and Japan offer an interesting comparison from the standpoint of geological hazards to society large unpredictable and massively erosive rivers in the former case volcanoes and accompanying earthquakes in the latter Within the North African region localized climatic changes led to abandonment of some desertified areas with successful adjustments in others with the ultimate evolution into the formative civilization of Egypt the Gift of the Nile At a smaller scale it is instructive to compare the city states of the Medieval and early Renaissance times that developed in the watershed of a single river the Arno in Tuscany and how Pisa Siena and Florence developed and reached their golden periods at different times depending on their location with regardto proximity to the sea to the main trunk of the river or in the adjacent hills Also noteworthy is the role of technology in opening up opportunities for a society Consider the Netherlands and how its history has been formed by the technical problem of a populous society dealing with too much water as an inexorably rising sea threatens their landscape or the case of communities in Colorado trying to deal with too little water for farmers and domestic users by bringing their supply over a mountain chain These and others cases included in the book provide evidence of the successes near misses and outright failures that mark our ongoing relationship with landscape throughout the history of Homo sapiens The hope is that compilations such as this will lead to a better understanding of the issue and provide us with knowledge valuable in planning a sustainable modus vivendi between humanity and landscape for as long as possible Audience The book will interest geomorphologists geologists geographers archaeologists anthropologists ecologists environmentalists historians and others in the academic world Practically planners and managers interested in landscape environmental conditions will find interest in these pages and more generally the increasingly large body of opinion in the general public with concerns about Planet Earth will find much to inform their opinions Extra material The color plate section is available at <http://extras.springer.com> *An Exploration of Space 1999 Through the Lens of Video Games: Payne 1999* John K. Balor, 2019-07-02 This book contains transcripts from Online Alpha discussions where the video game PAYNE 1999 game theory and game study theories are used for analysing and commenting on problems of conflict and cooperation in SPACE 1999 The discussions build on more than a decade of conversations and debate about PAYNE 1999 and the aim of the book is to put the various threads together while also developing new ideas and providing direction for further investigations The book has been developed on an idealistic basis and it is sold at the lowest price the publisher was willing to accept A free e book version can be downloaded at [www.lulu.com](http://www.lulu.com) **Encyclopedia of Soil Science** Ward Chesworth, 2007-11-22 The Encyclopedia of Soil Science provides a comprehensive alphabetical
