ABSTRACT

Herbal drugs are being used as medicines from ancient period. The increased use of herbal drugs, and concerns over their safety and efficacy have certainly augmented the need of standardization of these herbal drugs. WHO has set up guidelines for standardization of these drugs, which are used as a standard by the majority of countries. The standardization includes the external (macroscopy/microscopy) as well as internal examination/ash values, extractive values and many other parameters to identify, authenticate and study its chemical composition. Standardization of the medicinal plants will ensure indirectly that the plants are conserved for their medicinal and nutritive value. Standardization confirms the safety of the medicinal plant but efficacy has to be judged clinically or in the laboratory. There is a thin line between efficacy and the presence of chemical compounds in the drug. The major hurdle in standardization of the batch to batch variation in the plant compounds. Addition of finer analytical methods of the chemical compounds may help to minimize the variation and give a better resolution of the plant drug. Importance of toxicological examination has increased manifolds as contamination can occurs at various stages, from collection, storage, analysis or processing to extraction of active principles. These parameters should be recorded for years together; their database should be generated, recorded and analyzed statistically to see the difference in quality and quantity of the chemical compounds.

INTRODUCTION

Medicinal plants are in use for the purpose of treatment of different ailments since centuries. There has been an immense increase in sales of herbal OTC (Over the counter drugs). This is growing to a billion dollar industry. The need for safety and efficacy has also escalated since the western interest has grown. Thus the need for standardization has come into view. The process of evaluation of the quality and purity of

crude drugs by means of various parameters like morphological, microscopical, physical, chemical and biological observations is called standardization.¹ Standardisation of the herbal drug begins from the collection of the herbal drug to its packaging/use as medicine. The impediments in standardization of herbal drugs:

- Variability in the chemical composition of the soil and changes in the climate in-

Quality Control and Regulatory Compliance for Herbal Medication Raveesha Peeriga, Krishnaveni Manubolu, 2025-06-30
This comprehensive book provides a detailed framework for the evaluation and standardization of herbal products, promoting the safe and effective use of herbal medicines through rigorous testing and compliance with global regulatory requirements. It begins with an overview of the fundamental tests for medicinal plant materials, followed by an in-depth look at World Health Organization (WHO) guidelines for quality control and the evaluation of commercial drugs. The book explores quality assurance practices like cGMP, GAP, GMP, and GLP, with a focus on traditional medicine systems, while also examining EU and ICH guidelines, stability testing, and the application of chromatographic techniques in product standardization. Additionally, it addresses the preparation of documents for new drug applications, export registration, and regulatory requirements, as well as providing guidelines on Pharmacovigilance and comparisons between various herbal pharmacopoeias. A valuable reference work for professionals in the pharmaceutical industries as well as researchers and students interested in this topic.
