**Urban Foraging in the Changing World** Shalini Dhyani,Mallika Sardeshpande,2024-06-28 This volume brings together theoretical, experiential and creative perspectives on the phenomenon of urban foraging In a rapidly urbanising world foraging is regaining popularity as a way to connect with nature and cope with uncertainty Authors from various disciplines and geographies make sense of what this means for humanity Urban foraging represents a multifaceted movement that provides people with avenues for sustenance, socialising and spirituality Motivations and implications of urban foraging vary across the socioeconomic spectrum as do barriers and enablers Urban foraging can help people adapt to change and build resilience to shocks but its spontaneous and unregulated nature makes it attractive to many Recognising and promoting sustainable urban foraging therefore is a delicate balancing act This collection discusses the philosophical and practical considerations towards this aim The book is of interest to researchers, practitioners, entrepreneurs and creatives inviting readers to envisage scenarios that are desirable and achievable It is of special interest to those working in urban and

**Cognitive Movement Ecology** Eliezer Gurarie,Tal Avgar,2024-02-09 At least since Darwin argued that the difference in cognitive abilities between animals and humans is one of degree and not of kind the study of animal cognition has been an active and dynamic subfield of behavioral sciences It has however been based almost entirely on experimental studies of animals in captivity and belongs as a field more snugly in the realm of Psychology or Ethology with relatively little application to understanding the behavior of animals in the wild Movement Ecology in contrast is a more recent branch of Ecology devoted almost entirely to the analysis of animal movements in the wild Technological developments allow for animals to be tracked in the wild in ever increasing numbers precision and duration Movement ecology has to some extent chased the data reflecting the practical need to analyze and interpret those data Much of the most important developments of recent decades are devoted to dealing with the trickier aspects of the statistical analysis of movement data which in their multidimensionality autocorrelation gappiness and measurement error and behavioral complexity pose no shortage of hairy statistical problems
