Hanson, 2006-01-16 Publisher Description American Global Pre-eminence William R. Thompson, 2022 A unique analysis that assesses how we can determine which country will be the next world leader Will China surpass the United States as the world's leader In *American Global Pre-eminence* William R Thompson argues that the answer depends on leads in technological innovation energy and global reach These are the forces that influence the hierarchy of global power a system which began emerging a thousand years ago and started becoming more evident after the 1490s especially after Dutch activities in the seventeenth century and British operations in the nineteenth century The US followed in this fashion after 1945 Yet leads do not last forever Ironically as it becomes clearer how technological innovation military force and energy power interact the processes under scrutiny may themselves be fundamentally transforming Thus Thompson contends the real policy question is not whether the US is ahead or behind China but rather whether it will remain possible for a single

state to lead the global system As technological innovation energy consumption and global reach capability grow less concentrated the prospects for systemic leadership shrink even as global problems become more complex and acute With a sweeping analysis of global power Thompson provides a foundation for understanding the realities and possibilities of lead states past present and future
