THE 400 MILLION YEAR STORY
OF AUSTRALIA'S PLANTS

The Flowering Of Gondwana

Anthony S. Fauci

The Flowering Of Gondwana:

The Flowering of Gondwana Mary E. White, 1986 Illustrated with nearly four hundred magnificent photographs of fossils and living plants this book tells the story of Australia's remarkable floral heritage from its genesis through to its last stages of evolution while also providing a general introduction to major patterns in the history of plant life Over 50 million years ago when Australia broke away from the great supercontinent known as Gondwana which comprised all the major southern landmasses a modern aspect flora was already established and rainforests covered most of the land The remnant rainforests of Australia are ancestors of a unique flora that evolved in isolation as the continent moved slowly northward to the position it occupies today Here Mary White traces the evolution of plants from the earliest times when all life was confined to the water and the land was barren and describes the emergence of the first land plants about 400 million years ago Her portrayal of Australia's flora includes the changes that have since come with the arrival of settlers and their crops of exotic plants The fossil record studied in this book is a tantalizing key to visualizing the world as it once was The plants tell us of past climates conjure up a picture of ancient landscapes and explain configurations of land and sea on the ever changing surface of the earth A single source of information on fossil floras and environments of past ages The Flowering of Gondwana enables scientists and general readers to follow Australia's plant ancestry and to appreciate the individuality that has evolved from an inheritance in common with plants from other southern lands

The Flowering of Australia's Rainforests Geoff Williams, 2021-05-03 The Flowering of Australia's Rainforests provides a comprehensive introduction to the pollination ecology evolution and conservation of Australian rainforest plants with particular emphasis on subtropical rainforests and their associated pollinators This significantly expanded second edition includes new information on the impact of climate change fire fragmentation and invasive species Rainforests continue to be a focus of global conservation concern not only from threats to biodiversity in general but to pollinators specifically Within Australia this has been emphasised by recent cataclysmic fire impacts ongoing extreme drought events and the wider consideration of climate change This second edition strengthens coverage of these issues beyond that of the first edition The Flowering of Australia's Rainforests makes timely contributions to our understanding of the nature and function of the world's pollinator fauna plant reproduction dependencies and the evolutionary pathway that has brought them to their current state and function Illustrated with 150 colour plates of major species and rainforest formations this reference work will be of value to ecologists and field naturalists botanists conservation biologists ecosystem managers and community groups involved in habitat restoration

Pyne, 2015-09-14 Pyne traces the impact of fire in Australia from its influence on vegetation to its use by Aborigines and European settlers Mr Pyne showing what a historian deeply schooled in environmental science can contribute to our awareness of nature and culture has produced a provocative work that is a major contribution to the literature of environmental studies New York Times Book Review
