## **Stocks, Bonds, And The Investment Horizon: Decision-making For The Long Run**

Haim Levy, 2022-04-28 A century ago life expectancy was roughly 40 years hence all income could be consumed as for most people there was no need to save for retirement Today things have drastically changed Life expectancy exceeds 80 years in many countries and one should expect to live and consume many years after retirement Thus we have many investors with various investment horizons where the length of the investment horizon becomes a crucial factor in determining the best investment diversification This book analyzes the effect of the investment horizon on the optimal diversification specifically between stocks and bonds Should a young investor and an older investor have the same portfolio Is it recommended to savers for retirement to change the asset allocation between stocks and bonds as they grow older as life cycle mutual funds do in practice Is the idiom stocks for the long run backed by scientific evidence We analyze for which horizons it is recommended to employ the popular Mean Variance rule and for which horizons employing this rule induces an economic distortion hence a loss to the investors It is shown that all relevant parameters for investment choice means variances and correlations change in a non linear way with the horizon a fact that makes the investment horizon crucial for investment choices Similarly the popular Sharpe Treynor and Jensen performance indices vary with the assumed horizon even in the case of independence over time To analyze all the above issues we employ the Mean Variance rule and Stochastic Dominance rules as well as direct expected utility calculations
