**Focus on Earth Science** ,2001 *The Field Guide to Mixing Social and Biophysical Methods in Environmental Research* Rebecca Lave,Stuart Lane,2025-02-25 Despite ongoing debates about its origins the

Anthropocene a new epoch characterized by significant human impact on the Earth s geology and ecosystems is widely acknowledged Our environment is increasingly a product of interacting biophysical and social forces shaped by climate change colonial legacies gender norms hydrological processes and more Understanding these intricate interactions requires a mixed methods approach that combines qualitative and quantitative biophysical and social research However mixed methods environmental research remains rare hindered by academic boundaries limited training and the challenges of interdisciplinary collaboration Time funding and the integration of diverse data further complicate this research whilst the dynamics and ethics of interdisciplinary teams add another layer of complexity Despite these challenges mixed methods research offers a more robust and ultimately transformative understanding of environmental questions This Field Guide aims to inspire and equip researchers to undertake such studies Organized like a recipe book it assists researchers in the preparation of their field work as well as offering entry points to key methods and providing examples of successful mixed methods projects This book will be of interest to scholars wishing to tackle environmental research in a more holistic manner spanning sister disciplines such as anthropology statistics political science public health archaeology geography history ecology and Earth science

Many of these outstanding images are presented here and compared with photographs taken during earlier missions allowing detection of changes on the Earth's surface. Studies reported in this fascinating volume include observations of El Niño related phenomena fluctuating water levels of the Caspian and Aral Seas smoke dust and aerosols in the atmosphere urban land use changes and drought in the southeastern United States and Mexico. This valuable information and the techniques used to gather it will form the basis for future remote sensing studies to be conducted from the International Space Station.
