The Atacama Large Millimeter Array National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Board on Physics and Astronomy, Committee on Astronomy and Astrophysics, Committee to Review the Science Requirements for the Atacama Large Millimeter Array, 2005-10-27 The 1991 NRC decadal survey for astronomy and astrophysics included a project called the Millimeter Array MMA This instrument would be an array of millimeter wavelength telescopes intended to capture images of star forming regions and distant star burst galaxies With the addition of contributions from Europe the MMA evolved into the Atacama Large Millimeter Array ALMA a proposed array of 64 12 meter antennas The project is now part of the NSF Major Research Equipment and Facilities budget request Increased costs however have forced the NSF to reconsider the number of antennas To help with that review NSF asked the NRC to assess the scientific consequences of reducing the number of active antennas from 60 to either 50 or 40 This report presents an assessment of the effect of downsizing on technical performance specifications performance degradation and the ability to perform transformational science and of the minimum number of antennas needed **Science with the Atacama Large**
