**Astronomy** is the study of everything in the universe beyond Earth's atmosphere.

**Astronomy** studies objects that we can see with our naked eyes, like the Sun or the planets. However, it also studies objects we are not able to see without telescopes or other instruments, like faraway galaxies and tiny particles.

**Astronomy** is divided into 4 sub-fields: astrophysics (the laws of physics in space), astrometry (celestial bodies), astrogeology (rocks, terrain, and material in space) and astrobiology (searching for life outside Earth).
