[Designing and Teaching the Elementary Science Methods Course](#) Sandra K. Abell, Ken Appleton, Deborah L. Hanuscin, 2010. What do aspiring and practicing elementary science teacher education faculty need to know as they plan and carry out instruction for future elementary science teachers? This scholarly and practical guide for science teacher educators outlines the theory, principles and strategies needed and provides classroom examples anchored to those principles. The theoretical and empirical foundations are supported by scholarship in the field and the practical examples are derived from activities, lessons and units field tested in the authors elementary science methods courses. *Designing and Teaching the Elementary Science Methods Course* is grounded in the theoretical framework of pedagogical content knowledge (PCK) which describes how teachers transform subject matter knowledge into viable instruction in their discipline. Chapters on science methods, students as learners, the science methods course, curriculum, instructional strategies, methods course, assessment and the field experience help readers develop their PCK for teaching prospective elementary science teachers. Activities that Work and Tools for Teaching the Methods Course provide useful examples for putting this knowledge into action in the elementary science

Education Standards prepared by the National Research Council call for a revolution in science education. They stress that the science taught must be based on active inquiry and that science should become a core activity in every grade starting in kindergarten. This easy to read and practical book shows how to bring about the changes recommended in the standards. It provides guidelines for planning and implementing an inquiry based science program in any school district. The book is divided into three parts. Building a Foundation for Change presents a rationale for inquiry based science and describes how teaching through inquiry supports the way children naturally learn. It concludes with basic guidelines for planning a program. School administrators, teachers, and parents will be especially interested in the second part, The Nuts and Bolts of Change. This section describes the five building blocks of an elementary science program: Community and administrative support, A developmentally appropriate curriculum, Opportunities for professional development, Materials support, Appropriate assessment tools. Together these five elements provide a working model of how to implement hands on science. The third part, Inquiry Centered Science in Practice, presents profiles of the successful inquiry based science programs in districts nationwide. These profiles show how the principles of hands on science can be adapted to different school settings. If you want to improve the way science is taught in the elementary schools in your community, Science for All Children is an indispensable resource.
