### **Teaching, Learning & Researching**

Roberto Rocco,Gregory Bracken,Caroline Newton,Marcin Dabrowski,2022-09-22 This book is composed of a general introduction followed by 18 chapters written by teachers and researchers from TU Delft as well as frequent collaborators each describing an issue or tool used in Spatial Planning as it is taught and researched at our university The book aims to give readers around the world an introduction to how spatial planning is conceived at TU Delft Spatial planning is a highly idiosyncratic discipline and is conceived differently around the world In most places spatial planning is part of an architectural approach to the city in which design exists almost autonomously while in other places it is part of a political economical approach to the city What distinguishes Delft is the bridge we have managed to build between design and politics and the way we understand space as foundational for the understanding of socio economic processes This is anchored on a Dutch tradition of city making in which issues of maakbaarheid roughly translated by feasibility a guiding concept in Dutch society which was built upon an exceedingly difficult territory to plan design and manage Spatial planning in the Netherlands is hence a combination of planning design and management that is unique Simultaneously spatial planning as a discipline in the Netherlands is rather forward thinking

and uniquely equipped to deal with the great societal challenges of our time climate change pandemics growing inequality etc and may be useful for students and teachers elsewhere seeking to learn from other traditions Each chapter addresses issues that we see as central to the way of teaching and researching spatial planning     *A Study of the Influence of Recent Legislation on the Behavior of Schools and Elementary School Teachers* Christopher Cooper, 2004
