## “Teaching Machines”

- Goal: To expedite learning and reduce contingencies that may limit it. This is contradictory —→ Instruments
- Programming vs Order of the subject
- Reinforcement and Stimulus
- Affective learning. Effective praising is “self-satisfying”
- *“The humanist who induces, emulates and is enthusiastic about getting students to learn is controlling the student as the person who designs and programs a machine” - Skinner*

## **Teaching Machines Programmed Learning:**

Teaching Machines and Programmed Learning Arthur A. Lumsdaine, Robert Glaser, 1960      *Teaching Machines and Programming* K. Austwick, 2014-05-12 Teaching Machines and Programming covers the significant developments in teaching machines and automated teaching as well as the major theoretical issues and attributes involved in these procedures. After a brief introduction to teaching machine procedures this six chapter text goes on summarizing the industrial and military applications of teaching machines. The succeeding chapters consider the underlying theory function and schema of the adaptive teaching system which are related to recognizable teaching functions performed by a human tutor. The last chapters discuss the development and features of linear programs and their application as new teaching aid. These chapters also look into some practical problems arising in programming for schools. This book will prove useful to computer programmers, school administrators, teachers and students.      *Teaching Machines and Programmed Learning*, 1965      **Programmed**

**Learning in Perspective** I.K. Davies, 2017-09-05 The method of programming outlined in this book represents a major contribution to the growing body of literature in programmed learning. It is the first book in the field to present a carefully designed complete and integrated system for analyzing, organizing and structuring learning materials in programmed form. Application of the system is illustrated through the step by step construction of two short programs. Starting with the analysis of the syllabus and course content the authors take the reader through each phase of the programming process gathering and organizing the content material, construction of the program matrix and flow diagram and finally the writing of frames. Every teacher and trainer can benefit from the application of this method to lesson plan preparation and to classroom teaching techniques. Such a method is essential for all those who are writing programmed materials. In a new computer age classroom environment programmed learning can be especially beneficial. C A Thomas, I K Davies, D Openshaw and J B Bird are instructors or directors at the British Royal Air Force School of Education. They are pioneers in the application of programmed learning in Britain and are highly regarded as forward looking and creative educational research workers. Their accomplishments include in addition to this ingenious book the design and development of the Empirical Tutor, one of Britain's major teaching machines and the publication of a number of technical papers in the field of programmed learning. Lawrence M Stolzow is professor emeritus of psychological quantitative foundations at the University of Iowa.      **Teaching**
