Although instructors can turn to instructional design teams for assistance in using Learning Management System and its functions, they specifically need their own first-hand immersive learning within their pedagogical training. In other words, teachers need to learn in an online context like the environment that their students will use. Such direct training helps instructors to facilitate student learning in a technologically distributed classroom. Beyond learning technological skills to facilitate a course, these teachers need to learn to use the technology effectively to keep students on track and to teach them skills and material. This collection, which includes three contributions from 2007 and 10 from 2017, focuses on the types of professional development instructors need to be successful in the online technical communication classroom. Formed as a 10-year retrospective of the field and its advances in online education, professional development, the book offers instructors theoretical and practical suggestions for creating and teaching successful online courses and managing entire online technical communication programs. This book was originally published as a special issue of *Technical Communication Quarterly* (TCQ).

*The Language of Technical Communication* Ray Gallon, 2016-05-12. The *Language of Technical Communication* has a dual objective to define the terms that form the core of technical communication as it is practiced today while predicting where the field will go in the future. The choice of terms defined in this book followed two overarching principles: include all aspects of the discipline of technical communication, not just technical writing; and select terms that will be relevant into the foreseeable future. The *Language of Technical Communication* is a collaborative effort with fifty-two expert contributors all known for their depth of knowledge. You will probably recognize many of their names, and you will probably want to learn more about the ones who are new to you. Each contributed term has a concise definition, an importance statement, and an essay that describes why technical communicators need to know that term. You will find well-understood terms such as content reuse and minimalist design alongside new terms such as the Internet of Things and augmented reality. They span the depth and breadth as well as the past and future of technical communication. BASIC TECHNICAL COMMUNICATION
