Dealing with the Legacy of Authoritarianism Antonio Costa Pinto,Leonardo Morlino,2013-09-13 In recent years the agenda of how to deal with the past has become a central dimension of the quality of contemporary democracies Many years after the process of authoritarian breakdown consolidated democracies revisit the past either symbolically or to punish the elites associated with the previous authoritarian regimes New factors like international environment conditionality party cleavages memory cycles and commemorations or politics of apologies do sometimes bring the past back into the political arena This book addresses such themes by dealing with two dimensions of authoritarian legacies in Southern European democracies repressive institutions and human rights abuses The thrust of this book is that we should view transitional justice as part of a broader politics of the past an ongoing process in which elites and society under democratic rule revise the meaning of the past in terms of what they hope to achieve in the present This book was published as a special issue of South European Society and Politics

The Legacy of the Inverse Scattering Transform in Applied Mathematics J. L. Bona, Roy Choudhury, David Kaup, 2002 Swift progress and new applications characterize the area of solitons and the inverse scattering transform There are rapid developments in current nonlinear optical technology Larger intensities are more available pulse widths are smaller relaxation times and damping rates are less significant In keeping with these advancements exactly integrable soliton equations such as 3 wave resonant interactions and second harmonic generation are becoming more and more relevant in experimental applications Techniques are now being developed for using these interactions to frequency convert high intensity sources into frequency regimes where there are no lasers Other experiments involve using these interactions to develop intense variable frequency sources opening up even more possibilities This volume contains new developments and state of the art research arising from the conference on the Legacy of the Inverse Scattering Transform held at Mount Holyoke College South Hadley MA Unique to this volume is the opening section Reviews This part of the book provides reviews of major research results in the inverse scattering transform IST on the application of IST to classical problems in differential geometry on algebraic and analytic aspects of soliton type equations on a new method for studying boundary value problems for integrable partial differential equations PDEs in two dimensions on chaos in PDEs on advances in multi soliton complexes and on a unified approach to integrable systems via Painleve analysis This conference provided a forum for general exposition and discussion of recent developments in nonlinear waves and related areas with potential applications to other fields The book will be of interest to graduate students and researchers interested in mathematics physics and engineering
